Joel Paul Polizzi

Patient Health Summary, generated on Oct. 25, 2026

Patient Demographics - Gender: Male; born Jun. 28, 1986

Patient Address	Patient Name	Communication
3537 36TH ST *(Home)* SAN DIEGO, CA 92104	Joel Paul Polizzi	619-840-1117 (Home) 619-840-1117 (Mobile)
	Former / Aliases:	joel.polizzi@gmail.com
Former (Feb. 17, 2020 - Jan. 26, 2021): 3769 Wilson Ave APT G *(Home)* SAN DIEGO, CA 92104	Joel Paul Ohara Joel Polizzi Joel P Polizzi	jpolizzi@ucsd.edu

Language	Race / Ethnicity	Marital Status
English (Preferred)	White / Not Hispanic or Latino	Married

Note from UC Health (UC San Diego / UCSD and UC Riverside / UCR) and Affiliates

This document contains information that was shared with Joel Paul Polizzi. It may not contain the entire record from UC Health (UC San Diego / UCSD and UC Riverside / UCR) and Affiliates.

Allergies

Penicillins (Hives) - High Criticality

Medications

propranolol (INDERAL) 10 MG tablet (Started 11/1/2024)
Take 1 tablet (10 mg) by mouth 3 times daily as needed (If HR resting is over 90 beats per min).

sulfamethoxazole-trimethoprim (BACTRIM DS) 800-160 MG tablet (Started 2/21/2026)
Take 1 tablet by mouth 2 times daily.

methIMAzole (TAPAZOLE) 5 MG tablet (Started 8/3/2026)
Take 1.5 tablets (7.5 mg) by mouth daily.

Active Problems

Problem	Noted Date	Diagnosed Date
Abnormal CT scan, gastrointestinal tract	01/28/2025	
Graves disease	07/01/2024	
Essential tremor	01/31/2024	
Hematochezia	07/08/2020	

Immunizations

COVID-19 (COMIRNATY-Pfizer) Seasonal Vaccine, >=12 years (Given 11/20/2023)
COVID-19 (Pfizer) Gray Cap Bivalent Vaccine >= 12 Years (Given 9/18/2022)
COVID-19 (Pfizer) Purple Cap >= 12 Years (Given 10/25/2021, 3/14/2021, 2/21/2021)
Influenza Vaccine (Egg Allergy) >=6 Months (Given 10/23/2023)
Influenza Vaccine (Egg Allergy), Trivalent >=6 Months (Given 1/8/2025)
Influenza Vaccine >=6 Months (Given 9/18/2022, 10/21/2021, 9/12/2020)
Influenza Vaccine, Trivalent >=6 Months (Given 9/23/2025)
Pneumococcal 20 Vaccine (PREVNAR-20) (Given 1/29/2024)
Tdap (Given 3/22/2017)

Social History

Tobacco Use	Types	Packs/Day	Years Used	Date
Smoking Tobacco: Former	Cigarettes	0.5	10	05/01/2006 - 05/01/2016
Smokeless Tobacco: Never				

Tobacco Cessation: Counseling Given: Not Answered

Hunger Vital Sign	Answer	Date Recorded
Within the past 12 months, you worried that your food would run out before you got the money to buy more.	Never true	09/22/2025
Within the past 12 months, the food you bought just didn't last and you didn't have money to get more.	Never true	09/22/2025

PRAPARE - Transportation	Answer	Date Recorded
In the past 12 months, has lack of transportation kept you from medical appointments or from getting medications?	No	09/22/2025
In the past 12 months, has lack of transportation kept you from meetings, work, or from getting things needed for daily living?	No	09/22/2025

Housing Stability Vital Sign	Answer	Date Recorded
In the last 12 months, was there a time when you were not able to pay the mortgage or rent on time?	No	07/01/2024
In the last 12 months, how many places have you lived?	1	07/01/2024
In the last 12 months, was there a time when you did not have a steady place to sleep or slept in a shelter (including now)?	No	07/01/2024

Housing Stability Vital Sign	Answer	Date Recorded
In the last 12 months, was there a time when you were not able to pay the mortgage or rent on time?	No	09/22/2025
In the past 12 months, how many times have you moved where you were living?	0	09/22/2025
At any time in the past 12 months, were you homeless or living in a shelter (including now)?	No	09/22/2025

AHC Utilities	Answer	Date Recorded
In the past 12 months has the electric, gas, oil, or water company threatened to shut off services in your home?	No	09/22/2025

Depression	Answer	Date Recorded
PHQ9 Patient Summary Score (calculated)	0	12/17/2025

Drug Use (DAST)	Answer	Date Recorded
DAST Total Score	3	10/12/2021

Sex and Gender Information	Value	Date Recorded
Sex Assigned at Birth	Male	10/22/2018 8:07 AM PDT
Legal Sex	Male	02/10/2013 12:22 PM PST
Gender Identity	Male	10/22/2018 8:07 AM PDT
Sexual Orientation	Straight	10/22/2018 8:07 AM PDT

Last Filed Vital Signs

Vital Sign	Reading	Time Taken	Comments
Blood Pressure	138/93	04/27/2026 11:28 AM PDT	
Pulse	64	04/27/2026 11:28 AM PDT	
Temperature	36.2 °C (97.2 °F)	04/27/2026 11:28 AM PDT	
Respiratory Rate	17	02/21/2026 9:00 AM PST	
Oxygen Saturation	98%	02/21/2026 9:00 AM PST	
Inhaled Oxygen Concentration	-	-	
Weight	74.5 kg (164 lb 3.2 oz)	04/27/2026 11:28 AM PDT	
Height	175.3 cm (5' 9")	04/27/2026 11:28 AM PDT	
Body Mass Index	24.25	04/27/2026 11:28 AM PDT	

Procedures

ENDOSCOPY MISC PROCEDURE (Performed 4/10/2025)

COLONOSCOPY PROCEDURE (Performed 7/27/2020)

Results

(ABNORMAL) TSH, BLOOD - Final result (08/03/2026 8:07 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature

(ABNORMAL) THYROID STIMULATING IMMUNOGLOBULIN (TSI)-ARUP - Final result (05/29/2026 8:10 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Thyroid Stimulating Immunoglobulin-TSI-ARUP	**5.06 (H)**	<=0.54 [IU]/L		06/01/2026 10:44 PM PDT	ARUP	

Comment:

```
INTERPRETIVE INFORMATION: Thyroid Stimulating Immunoglobulin
                          (TSI)
0.54 IU/L or less.........Consistent with healthy thyroid function
or non-Graves thyroid or autoimmune disease. Those with healthy
thyroid function typically have results less than 0.1 IU/L.
0.55 IU/L or greater......Consistent with Graves disease
(autoimmune hyperthyroidism)
This assay specifically detects thyroid stimulating
autoantibodies. For diagnostic purposes, the results obtained from
this assay should be used in combination with clinical
examination, patient medical history, and other findings.
Performed By: ARUP Laboratories
500 Chipeta Way
Salt Lake City, UT 84108
Laboratory Director: Jonathan R. Genzen, MD, PhD

(ABNORMAL) THYROID STIMULATING IMMUNOGLOBULIN (TSI)-ARUP - Final result (06/05/2025 8:41 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Thyroid Stimulating Immunoglobulin-TSI-ARUP	**3.14 (H)**	<=0.54 [IU]/L		06/07/2025 12:15 PM PDT	ARUP	

Comment:

```
INTERPRETIVE INFORMATION: Thyroid Stimulating Immunoglobulin
                          (TSI)
0.54 IU/L or less.........Consistent with healthy thyroid function
or non-Graves thyroid or autoimmune disease. Those with healthy
thyroid function typically have results less than 0.1 IU/L.
0.55 IU/L or greater......Consistent with Graves disease
(autoimmune hyperthyroidism)
This assay specifically detects thyroid stimulating
autoantibodies. For diagnostic purposes, the results obtained from
this assay should be used in combination with clinical
examination, patient medical history, and other findings.
Performed By: ARUP Laboratories
500 Chipeta Way
Salt Lake City, UT 84108
Laboratory Director: Jonathan R. Genzen, MD, PhD

HS TROPONIN I - Final result (06/01/2025 11:01 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
TROPONIN I [TROPI]	9	<76 ng/L		06/01/2025 11:28 PM PDT	EAST CAMPUS MEDICAL CENTER	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature

Comment:

High-sensitivity Troponin I (hsTnI) assay can reliably detect low troponin concentrations relative to conventional troponin assays. It is the preferred marker of myocardial necrosis as recommended by the Fourth Universal Definition of Myocardial Infarction Guidelines.

The diagnosis of acute myocardial infarction (AMI) is made based on a rise or fall of troponin with at least one measurement exceeding the laboratory's upper limit of normal(indicating myocardial injury), in the context of reasonable suspicion for coronary ischemia (e.g. typical symptoms, changes on ECG, evidence for loss of myocardial function or demonstration of obstructive coronary artery disease).

NOTE: Although abnormal hsTnI values reflect INJURY to myocardial cells, an elevated hsTnI does not indicate the CAUSE of injury (i.e. ischemia versus non-ischemic disease).

In some cases, myocardial injury is chronic and relatively stable such that hsTnI values remain elevated but do not change substantially over hours to days (examples include chronic kidney disease, heart failure or advanced patient age).

When determining whether there has been a significant rise or fall of troponin on serial sampling, absolute change in troponin concentration has greater diagnostic accuracy for AMI than relative change criteria. A change of >7 ng/L over a 2-hour interval or a change of >10 ng/L over a 3-hour interval is suggested as a significant change. If the initial hsTnI is below or slightly above the 99th percentile upper reference limit, a 50% change from the baseline is considered significant. If the initial hsTnI is above the 99th percentile upper reference limit, a 20% change from the baseline value is considered significant.

PRO BNP, BLOOD - Final result (06/01/2025 10:01 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
ProBNP	<36	0 - 449 pg/mL		06/01/2025 10:43 PM PDT	EAST CAMPUS MEDICAL CENTER	

Comment:

```
The ProBNP test should not be used as absolute
evidence for congestive heart failure (CHF).  The
results should be interpreted along with clinical
findings and other laboratory test results.  Blood
concentrations of ProBNP may be elevated in patients
who are experiencing a myocardial infarction, in
patients that are candidates for renal dialysis, in
patients that have had renal dialysis, and in one
out of four female patients that are greater than
75 years of age.
```

FINAL PATHOLOGIC DIAGNOSIS:
A: Duodenum, biopsy:
-Duodenal mucosa with foveolar metaplasia involved by Helicobacter pylori and chronic inflammation.
SPECIMEN(S) SUBMITTED:
A: Duodenal biopsies
CLINICAL HISTORY:
Abnormal CT
INTRAOPERATIVE CONSULTATION (Frozen Section Diagnosis):
Not Applicable
GROSS DESCRIPTION:
A: The specimen received in formalin labeled with the patient's name, DOB, and "duodenal biopsies" consists of six tan-pink friable fragments of soft tissue measuring 0.3 up to 0.7 cm in greatest dimension. The specimen is filtered and entirely submitted in two cassettes, A1-A2.

Narrative

10/18/2024 5:48 AM PDT
Radiation Dose CTDIVOL = 15.55 (mGy): DLP = 796 (mGy-cm)

PROCEDURE INFORMATION:
Exam: CT Abdomen And Pelvis With Contrast
Exam date and time: 10/18/2024 4:47 AM
Age: 38 years old
Clinical indication: Other: . ; Additional info: Continued epigastric pain

TECHNIQUE:
Imaging protocol: Computed tomography of the abdomen and pelvis with contrast.
Radiation optimization: All CT scans at this facility use at least one of these
dose optimization techniques: automated exposure control; mA and/or kV
adjustment per patient size (includes targeted exams where dose is matched to
clinical indication); or iterative reconstruction.
Contrast material: OMNI 350; Contrast volume: 100 ml; Contrast route:
INTRAVENOUS (IV);

COMPARISON:
US ABDOMEN LIMITED 10/18/2024 1:49 AM

RADIATION DOSE METRICS:
CTDI volume (mGy): 15.55
Total DLP (mGy-cm): 796

FINDINGS:
Liver: Normal. No mass.
Gallbladder and biliary ducts: Normal. No calcified stones. No ductal dilation.
Pancreas: Normal. No ductal dilation.
Spleen: Normal. No splenomegaly.
Adrenal glands: Normal. No mass.
Kidneys and ureters: Normal. No hydronephrosis.
Stomach and bowel: Small polyps within the 2nd portion of the duodenum. No
obstruction. No mucosal thickening.
Appendix: No evidence of appendicitis.

Intraperitoneal space: Unremarkable. No free air. No significant fluid
collection.
Vasculature: Unremarkable. No abdominal aortic aneurysm.
Lymph nodes: Unremarkable. No enlarged lymph nodes.
Urinary bladder: Unremarkable as visualized.
Reproductive: Unremarkable as visualized.
Bones/joints: Unremarkable. No acute fracture.
Soft tissues: Unremarkable.

Procedure Note

Narrative

10/18/2024 4:36 AM PDT

PROCEDURE INFORMATION:
Exam: US Abdomen, Limited; Right Upper Quadrant
Exam date and time: 10/18/2024 1:49 AM
Age: 38 years old
Clinical indication: Abdominal pain; Additional info: Epigastric pain, rule out
hepatobiliary cause

TECHNIQUE:
Imaging protocol: Real time ultrasound of the abdomen with image documentation.
Limited exam focused on the right upper quadrant.

COMPARISON:
No relevant prior studies available.

FINDINGS:
Liver: Normal. No masses.
Gallbladder: Normal. No gallstones. There is no gallbladder wall thickening.
Biliary ducts: Normal. No stones. No dilation.
Pancreas: Visualized pancreas is unremarkable.
Right kidney: Normal. No mass. No hydronephrosis.

VARICELLA IGG ANTIBODY QUANTITATIVE - Final result (08/07/2024 8:15 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Varicella IgG Antibody Quantitative	2,087.0	See Comment INDEX		08/08/2024 10:57 AM PDT	CENTER ADV LAB MEDICINE	

Comment:

```
<135.0 Index = Negative
=>135.0 - <165.0 Index = Equivocal (A second sample should be collected).
=>165.0 Index = Positive
Presence of detectable VZV IgG antibodies. A positive result generally
indicates exposure to the pathogen or administration of specific
immune-globulins, but it is no indication of active infection or stage of
disease.
```

(ABNORMAL) THYROID STIMULATING IMMUNOGLOBULIN (TSI)-ARUP - Final result (02/01/2024 3:29 PM PST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Thyroid Stimulating Immunoglobulin-TSI-ARUP	**11.10 (H)**	<=0.54 [IU]/L		02/03/2024 9:52 PM PST	ARUP	

Comment:

```
INTERPRETIVE INFORMATION: Thyroid Stimulating Immunoglobulin
                          (TSI)
0.54 IU/L or less.........Consistent with healthy thyroid function
or non-Graves thyroid or autoimmune disease. Those with healthy
thyroid function typically have results less than 0.1 IU/L.
0.55 IU/L or greater......Consistent with Graves disease
(autoimmune hyperthyroidism)
This assay specifically detects thyroid stimulating
autoantibodies. For diagnostic purposes, the results obtained from
this assay should be used in combination with clinical
examination, patient medical history, and other findings.
Performed By: ARUP Laboratories
500 Chipeta Way
Salt Lake City, UT 84108
Laboratory Director: Jonathan R. Genzen, MD, PhD
CLIA Number: 46D0523979
```

LIPID(CHOL FRACT) PANEL, BLOOD - Final result (01/29/2024 11:02 AM PST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Cholesterol	118	<200 mg/dL		01/29/2024 5:01 PM PST	CENTER ADV LAB MEDICINE	

Comment:
```
Borderline Risk 200-240 mg/dL
High Risk > 240 mg/dL
```

HDL-Cholesterol	38	mg/dL		01/29/2024 5:01 PM PST	CENTER ADV LAB MEDICINE	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Comment: An HDL Cholesterol <40 mg/dL is a risk factor for coronary heart disease.						
LDL-Chol (Calc)	60	<160 mg/dL		01/29/2024 5:01 PM PST	CENTER ADV LAB MEDICINE	
Non-HDL Cholesterol	80	mg/dL		01/29/2024 5:01 PM PST	CENTER ADV LAB MEDICINE	
Comment: NonHDL Cholesterol target concentrations for lipid lowering depend on patients risk and are typically 30 mg/dL higher than LDL targets.						
Triglycerides	98	10 - 170 mg/dL		01/29/2024 5:01 PM PST	CENTER ADV LAB MEDICINE	

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time

GLYCOSYLATED HGB(A1C), BLOOD - Final result (01/29/2024 11:02 AM PST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Glyco Hgb (A1C)	4.9	4.8 - 5.8 %		01/29/2024 7:30 PM PST	CENTER ADV LAB MEDICINE	
Comment: Hemoglobin A1c values of 5.7-6.4 percent indicate an increased risk for developing diabetes mellitus. Hemoglobin A1c values greater than or equal to 6.5 percent are diagnostic of diabetes mellitus. Diagnosis should be confirmed by repeating the Hb A1c test. Hb F higher than 10 percent of total Hb may yield falsely low results. Conditions that shorten red cell survival, such as the presence of unstable hemoglobins like Hb SS, Hb CC, and Hb SC, or other causes of hemolytic anemia may yield falsely low results. Iron deficiency anemia may yield falsely high results.

PROTHROMBIN TIME, BLOOD - Final result (06/23/2020 2:00 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
PT,Patient	11.5	9.7 - 12.5 sec		06/23/2020 4:58 PM PDT	CENTER ADV LAB MEDICINE	
INR	1.1			06/23/2020 4:58 PM PDT	CENTER ADV LAB MEDICINE	

Comment:

```
For patients who are on oral anticoagulant
therapy, the recommended international normalized
ratio (INR) is: INR = 2-3 for most patients
                INR = 2.5-3.5 for patients with
                mechanical prosthetic heart valves
```

LIPID(CHOL FRACT) PANEL, BLOOD - Final result (03/22/2017 11:52 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Cholesterol	142	<200 mg/dL			CENTER ADV LAB MEDICINE	

Comment:
Borderline Risk 200-240 mg/dL
High Risk > 240 mg/dL

HDL-Cholesterol	60	mg/dL			CENTER ADV LAB MEDICINE	

Comment:
An HDL Cholesterol <40 mg/dL is a risk factor for coronary heart disease.

LDL-Chol (Calc)	71	<160 mg/dL			CENTER ADV LAB MEDICINE	
Non-HDL Cholesterol	82	mg/dL			CENTER ADV LAB MEDICINE	

Comment:
NonHDL Cholesterol target concentrations for lipid lowering depend on patients risk and are typically 30 mg/dL higher than LDL targets.

Triglycerides	57	10 - 170 mg/dL			CENTER ADV LAB MEDICINE

(ABNORMAL) GLYCOSYLATED HGB(A1C), BLOOD - Final result (03/22/2017 11:52 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Glyco Hgb (A1C)	**4.7 (L)**	4.8 - 5.9 %			CENTER ADV LAB MEDICINE	

Comment:

```
Hemoglobin A1c values of 5.7-6.4 percent indicate an increased risk for
developing diabetes mellitus. Hemoglobin A1c values greater than or equal to
6.5 percent are diagnostic of diabetes mellitus. Diagnosis should be
confirmed by repeating the Hb A1c test. Hb F higher than 10 percent of total
Hb may yield falsely low results. Conditions that shorten red cell survival,
such as the presence of unstable hemoglobins like Hb SS, Hb CC, and Hb SC,
or other causes of hemolytic anemia may yield falsely low results. Iron
deficiency anemia may yield falsely high results.
```

(ABNORMAL) THYROID STIMULATING IMMUNOGLOBULIN (TSI)-ARUP - Final result (05/29/2026 8:10 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Thyroid Stimulating Immunoglobulin-TSI-ARUP	**5.06 (H)**	<=0.54 [IU]/L		06/01/2026 10:44 PM PDT	ARUP	

Comment:

```
INTERPRETIVE INFORMATION: Thyroid Stimulating Immunoglobulin
                          (TSI)
0.54 IU/L or less.........Consistent with healthy thyroid function
or non-Graves thyroid or autoimmune disease. Those with healthy
thyroid function typically have results less than 0.1 IU/L.
0.55 IU/L or greater......Consistent with Graves disease
(autoimmune hyperthyroidism)
This assay specifically detects thyroid stimulating
autoantibodies. For diagnostic purposes, the results obtained from
this assay should be used in combination with clinical
examination, patient medical history, and other findings.
Performed By: ARUP Laboratories

(ABNORMAL) THYROID STIMULATING IMMUNOGLOBULIN (TSI)-ARUP - Final result (06/05/2025 8:41 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Thyroid Stimulating Immunoglobulin-TSI-ARUP	**3.14 (H)**	<=0.54 [IU]/L		06/07/2025 12:15 PM PDT	ARUP	

Comment:

```
INTERPRETIVE INFORMATION: Thyroid Stimulating Immunoglobulin
                          (TSI)
0.54 IU/L or less.........Consistent with healthy thyroid function
or non-Graves thyroid or autoimmune disease. Those with healthy
thyroid function typically have results less than 0.1 IU/L.
0.55 IU/L or greater......Consistent with Graves disease
(autoimmune hyperthyroidism)
This assay specifically detects thyroid stimulating
autoantibodies. For diagnostic purposes, the results obtained from
this assay should be used in combination with clinical
examination, patient medical history, and other findings.

HS TROPONIN I - Final result (06/01/2025 11:01 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
TROPONIN I [TROPI]	9	<76 ng/L		06/01/2025 11:28 PM PDT	EAST CAMPUS MEDICAL CENTER	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature

Comment:

High-sensitivity Troponin I (hsTnI) assay can reliably detect low troponin concentrations relative to conventional troponin assays. It is the preferred marker of myocardial necrosis as recommended by the Fourth Universal Definition of Myocardial Infarction Guidelines.

The diagnosis of acute myocardial infarction (AMI) is made based on a rise or fall of troponin with at least one measurement exceeding the laboratory's upper limit of normal(indicating myocardial injury), in the context of reasonable suspicion for coronary ischemia (e.g. typical symptoms, changes on ECG, evidence for loss of myocardial function or demonstration of obstructive coronary artery disease).

NOTE: Although abnormal hsTnI values reflect INJURY to myocardial cells, an elevated hsTnI does not indicate the CAUSE of injury (i.e. ischemia versus non-ischemic disease).

In some cases, myocardial injury is chronic and relatively stable such that hsTnI values remain elevated but do not change substantially over hours to days (examples include chronic kidney disease, heart failure or advanced patient age).

When determining whether there has been a significant rise or fall of troponin on serial sampling, absolute change in troponin concentration has greater diagnostic accuracy for AMI than relative change criteria. A change of >7 ng/L over a 2-hour interval or a change of >10 ng/L over a 3-hour interval is suggested as a significant change. If the initial hsTnI is below or slightly above the 99th percentile upper reference limit, a 50% change from the baseline is considered significant. If the initial hsTnI is above the 99th percentile upper reference limit, a 20% change from the baseline value is considered significant.

PRO BNP, BLOOD - Final result (06/01/2025 10:01 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
ProBNP	<36	0 - 449 pg/mL		06/01/2025 10:43 PM PDT	EAST CAMPUS MEDICAL CENTER	

Comment:

```
The ProBNP test should not be used as absolute
evidence for congestive heart failure (CHF).  The
results should be interpreted along with clinical
findings and other laboratory test results.  Blood
concentrations of ProBNP may be elevated in patients
who are experiencing a myocardial infarction, in
patients that are candidates for renal dialysis, in
patients that have had renal dialysis, and in one
out of four female patients that are greater than
75 years of age.
```

UCSD PATHOLOGY SYSTEMS - 04/15/2025 8:32 AM PDT

Narrative

FINAL PATHOLOGIC DIAGNOSIS:
A: Duodenum, biopsy:
-Duodenal mucosa with foveolar metaplasia involved by Helicobacter pylori and chronic inflammation.
SPECIMEN(S) SUBMITTED:
A: Duodenal biopsies
CLINICAL HISTORY:
Abnormal CT
INTRAOPERATIVE CONSULTATION (Frozen Section Diagnosis):
Not Applicable
GROSS DESCRIPTION:
A: The specimen received in formalin labeled with the patient's name, DOB, and "duodenal biopsies" consists of six tan-pink friable fragments of soft tissue measuring 0.3 up to 0.7 cm in greatest dimension. The specimen is filtered and entirely submitted in two cassettes, A1-A2.
NGM 04/11/2025
Grossed at Jacobs Medical Center
ACCESSION NUMBER: HCS-25-13183
UC San Diego Health Clinical Laboratories
La Jolla, 9300 Campus Point Dr., La Jolla, CA 92037.
Hillcrest, 200 W Arbor Dr., San Diego, CA 92103-1911.
ECOB, 9444 Medical Center Drive, San Diego, CA 92037.
The technical component procedures of all reported pathology services are performed at La Jolla, unless otherwise specified.
CONFIDENTIAL HEALTH INFORMATION: Health Care information is personal and sensitive information. If it is being faxed to you it is done so under appropriate authorization from the patient or under circumstances that do not require patient authorization. You, the recipient, are obligated to maintain it in a safe, secure and confidential manner. Re-disclosure without additional patient consent or as permitted by law is prohibited. Unauthorized re-disclosure or failure to maintain confidentiality could subject you to penalties described in federal and state law. If you have received this report or facsimile in error, please notify the UCSD Pathology Department immediately and destroy the received document(s).
Final Diagnosis performed by Jingjing Hu M.D., Ph.D. (65048) Electronically signed 4/15/25 8:32 Interpretation performed at UC SAN DIEGO HEALTH ECOB, 9444 MEDICAL CENTER DR, LA JOLLA, CA, 92037 Electronic Signature derived from a single controlled access password.

Narrative

10/18/2024 5:48 AM PDT
Radiation Dose CTDIVOL = 15.55 (mGy): DLP = 796 (mGy-cm)

PROCEDURE INFORMATION:
Exam: CT Abdomen And Pelvis With Contrast
Exam date and time: 10/18/2024 4:47 AM
Age: 38 years old
Clinical indication: Other: . ; Additional info: Continued epigastric pain

TECHNIQUE:
Imaging protocol: Computed tomography of the abdomen and pelvis with contrast.
Radiation optimization: All CT scans at this facility use at least one of these
dose optimization techniques: automated exposure control; mA and/or kV
adjustment per patient size (includes targeted exams where dose is matched to
clinical indication); or iterative reconstruction.
Contrast material: OMNI 350; Contrast volume: 100 ml; Contrast route:
INTRAVENOUS (IV);

COMPARISON:
US ABDOMEN LIMITED 10/18/2024 1:49 AM

RADIATION DOSE METRICS:
CTDI volume (mGy): 15.55
Total DLP (mGy-cm): 796

FINDINGS:
Liver: Normal. No mass.
Gallbladder and biliary ducts: Normal. No calcified stones. No ductal dilation.
Pancreas: Normal. No ductal dilation.
Spleen: Normal. No splenomegaly.
Adrenal glands: Normal. No mass.
Kidneys and ureters: Normal. No hydronephrosis.
Stomach and bowel: Small polyps within the 2nd portion of the duodenum. No
obstruction. No mucosal thickening.
Appendix: No evidence of appendicitis.

Intraperitoneal space: Unremarkable. No free air. No significant fluid
collection.
Vasculature: Unremarkable. No abdominal aortic aneurysm.
Lymph nodes: Unremarkable. No enlarged lymph nodes.
Urinary bladder: Unremarkable as visualized.
Reproductive: Unremarkable as visualized.
Bones/joints: Unremarkable. No acute fracture.
Soft tissues: Unremarkable.

Procedure Note

Narrative

10/18/2024 4:36 AM PDT

PROCEDURE INFORMATION:
Exam: US Abdomen, Limited; Right Upper Quadrant
Exam date and time: 10/18/2024 1:49 AM
Age: 38 years old
Clinical indication: Abdominal pain; Additional info: Epigastric pain, rule out
hepatobiliary cause

TECHNIQUE:
Imaging protocol: Real time ultrasound of the abdomen with image documentation.
Limited exam focused on the right upper quadrant.

COMPARISON:
No relevant prior studies available.

FINDINGS:
Liver: Normal. No masses.
Gallbladder: Normal. No gallstones. There is no gallbladder wall thickening.
Biliary ducts: Normal. No stones. No dilation.
Pancreas: Visualized pancreas is unremarkable.
Right kidney: Normal. No mass. No hydronephrosis.

Procedure Note

Amy Marie Federico - 10/18/2024

Formatting of this note might be different from the original.

PROCEDURE INFORMATION:
Exam: US Abdomen, Limited; Right Upper Quadrant
Exam date and time: 10/18/2024 1:49 AM
Age: 38 years old
Clinical indication: Abdominal pain; Additional info: Epigastric pain, rule out
hepatobiliary cause

TECHNIQUE:
Imaging protocol: Real time ultrasound of the abdomen with image documentation.
Limited exam focused on the right upper quadrant.

COMPARISON:
No relevant prior studies available.

FINDINGS:
Liver: Normal. No masses.
Gallbladder: Normal. No gallstones. There is no gallbladder wall thickening.
Biliary ducts: Normal. No stones. No dilation.
Pancreas: Visualized pancreas is unremarkable.
Right kidney: Normal. No mass. No hydronephrosis.

IMPRESSION:
IMPRESSION:
No acute findings.

VARICELLA IGG ANTIBODY QUANTITATIVE - Final result (08/07/2024 8:15 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Varicella IgG Antibody Quantitative	2,087.0	See Comment INDEX		08/08/2024 10:57 AM PDT	CENTER ADV LAB MEDICINE	

Comment:

```
<135.0 Index = Negative
=>135.0 - <165.0 Index = Equivocal (A second sample should be collected).
=>165.0 Index = Positive
Presence of detectable VZV IgG antibodies. A positive result generally
indicates exposure to the pathogen or administration of specific
immune-globulins, but it is no indication of active infection or stage of
disease.
```

MEASLES IGG ANTIBODY QUANTITATIVE - Final result (08/07/2024 8:15 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Measles IgG Antibody Quantitative	84.5	See Comment AU/mL		08/08/2024 10:56 AM PDT	CENTER ADV LAB MEDICINE	

Comment:

```
<13.5 AU/mL = Negative
=>13.5 - <16.5 AU/mL = Equivocal (A second sample should be collected no
less than one or two weeks later).
=>16.5 AU/mL = Positive
Presence of detectable measles virus IgG antibodies. A positive result
generally indicates past exposure to measles virus or previous vaccination.
```

MUMPS IGG ANTIBODY QUANTITATIVE - Final result (07/18/2024 1:25 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Mumps IgG Antibody Quantitative	52.6	See Comment AU/mL		07/22/2024 12:51 PM PDT	CENTER ADV LAB MEDICINE	

Comment:

```
<9.0 AU/mL = Negative
=> 9.0 - <11.0 AU/mL = Equivocal (A second sample should be collected no
less than one or two weeks later).
=>11.0 AU/mL = Positive
Presence of detectable mumps virus IgG antibodies. A positive result
generally indicates past exposure to mumps virus or previous vaccination.
```

(ABNORMAL) THYROID STIMULATING IMMUNOGLOBULIN (TSI)-ARUP - Final result (02/01/2024 3:29 PM PST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Thyroid Stimulating Immunoglobulin-TSI-ARUP	**11.10 (H)**	<=0.54 [IU]/L		02/03/2024 9:52 PM PST	ARUP	

Comment:

```
INTERPRETIVE INFORMATION: Thyroid Stimulating Immunoglobulin
                          (TSI)
0.54 IU/L or less.........Consistent with healthy thyroid function
or non-Graves thyroid or autoimmune disease. Those with healthy
thyroid function typically have results less than 0.1 IU/L.
0.55 IU/L or greater......Consistent with Graves disease
(autoimmune hyperthyroidism)
This assay specifically detects thyroid stimulating
autoantibodies. For diagnostic purposes, the results obtained from
this assay should be used in combination with clinical
examination, patient medical history, and other findings.
Performed By: ARUP Laboratories
500 Chipeta Way
Salt Lake City, UT 84108
Laboratory Director: Jonathan R. Genzen, MD, PhD
CLIA Number: 46D0523979

GLYCOSYLATED HGB(A1C), BLOOD - Final result (01/29/2024 11:02 AM PST)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Glyco Hgb (A1C)	4.9	4.8 - 5.8 %		01/29/2024 7:30 PM PST	CENTER ADV LAB MEDICINE	
Comment: Hemoglobin A1c values of 5.7-6.4 percent indicate an increased risk for developing diabetes mellitus. Hemoglobin A1c values greater than or equal to 6.5 percent are diagnostic of diabetes mellitus. Diagnosis should be confirmed by repeating the Hb A1c test. Hb F higher than 10 percent of total Hb may yield falsely low results. Conditions that shorten red cell survival, such as the presence of unstable hemoglobins like Hb SS, Hb CC, and Hb SC, or other causes of hemolytic anemia may yield falsely low results. Iron deficiency anemia may yield falsely high results.

PROTHROMBIN TIME, BLOOD - Final result (06/23/2020 2:00 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
PT,Patient	11.5	9.7 - 12.5 sec		06/23/2020 4:58 PM PDT	CENTER ADV LAB MEDICINE	
INR	1.1			06/23/2020 4:58 PM PDT	CENTER ADV LAB MEDICINE	

Comment:

```
For patients who are on oral anticoagulant
therapy, the recommended international normalized
ratio (INR) is: INR = 2-3 for most patients
                INR = 2.5-3.5 for patients with
                mechanical prosthetic heart valves
```

LIPID(CHOL FRACT) PANEL, BLOOD - Final result (03/22/2017 11:52 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Cholesterol	142	<200 mg/dL			CENTER ADV LAB MEDICINE	

Comment:
Borderline Risk 200-240 mg/dL
High Risk > 240 mg/dL

HDL-Cholesterol	60	mg/dL			CENTER ADV LAB MEDICINE	

Comment:
An HDL Cholesterol <40 mg/dL is a risk factor for coronary heart disease.

LDL-Chol (Calc)	71	<160 mg/dL			CENTER ADV LAB MEDICINE	
Non-HDL Cholesterol	82	mg/dL			CENTER ADV LAB MEDICINE	

Comment:
NonHDL Cholesterol target concentrations for lipid lowering depend on patients risk and are typically 30 mg/dL higher than LDL targets.

Triglycerides	57	10 - 170 mg/dL			CENTER ADV LAB MEDICINE

(ABNORMAL) GLYCOSYLATED HGB(A1C), BLOOD - Final result (03/22/2017 11:52 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Glyco Hgb (A1C)	**4.7 (L)**	4.8 - 5.9 %			CENTER ADV LAB MEDICINE	

Comment:

```
Hemoglobin A1c values of 5.7-6.4 percent indicate an increased risk for
developing diabetes mellitus. Hemoglobin A1c values greater than or equal to
6.5 percent are diagnostic of diabetes mellitus. Diagnosis should be
confirmed by repeating the Hb A1c test. Hb F higher than 10 percent of total
Hb may yield falsely low results. Conditions that shorten red cell survival,
such as the presence of unstable hemoglobins like Hb SS, Hb CC, and Hb SC,
or other causes of hemolytic anemia may yield falsely low results. Iron
deficiency anemia may yield falsely high results.
```

(ABNORMAL) THYROID STIMULATING IMMUNOGLOBULIN (TSI)-ARUP - Final result (05/29/2026 8:10 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Thyroid Stimulating Immunoglobulin-TSI-ARUP	**5.06 (H)**	<=0.54 [IU]/L		06/01/2026 10:44 PM PDT	ARUP	

Comment:

```
INTERPRETIVE INFORMATION: Thyroid Stimulating Immunoglobulin
                          (TSI)
0.54 IU/L or less.........Consistent with healthy thyroid function
or non-Graves thyroid or autoimmune disease. Those with healthy
thyroid function typically have results less than 0.1 IU/L.
0.55 IU/L or greater......Consistent with Graves disease
(autoimmune hyperthyroidism)
This assay specifically detects thyroid stimulating
autoantibodies. For diagnostic purposes, the results obtained from
this assay should be used in combination with clinical
examination, patient medical history, and other findings.

Patient Instructions
Preethika Subashini Ekanayake - 04/27/2026 11:30 AM PDT
Formatting of this note might be different from the original.
6 months follow up video ok

Do labs in 1 months

Continue 2.5 mg methimazole

If levels go up and down, I will recommend thyroidectomy but so far so good

Get back into some aerobic activity. You can start gently and do hikes or yoga or pilates, elliptical, weights. Do whatever you enjoy
If you notice heart rate goes up to 170+ with MILD exertion, that is odd and you should talk to pcp about repeat cardiac work up
When you get palpitations, please journal on your phone quickly what preceded it. Did something happen, what were you doing, were you anxious, was there stress ect.

Chief Complaint
Patient presents with
•	Thyroid Problem

ASSESSMENT/RECOMMENDATIONS:

Assessment ** **
Joel Paul Polizzi is a 39 year old male who presents for evaluation of new Graves disease.

Graves disease
Diagnosed Feb 2024, started on methimazole. Was taken off for about a month due to hypothyroid labs and has come back on the medication in early July 2024. Symptoms now resolved. Discussed prognosis of disease and treatment options including definitive treatment with surgery. Discussed also that 1/3 of patients achieve remission with MMI within 1-2 years. Given he was started on MMI fairly recently in February 2024, will plan to continue for now.

Plan ** **
- Continue methimazole 2.5 mg as last labs look excellent

- labs great now

- Labs again in 1 month - include Graves antibodies
Talk to primary care about any further palpitations and keep a journal about 1 palpitations occur to see if these are anxiety driven or cardiac driven
He is euthyroid currently so this is not contributing to any intermittent palpitations
Consider repeat cardiac workup with new primary care provider

- bedside US below 4/27/26

Even over definitive treatment like thyroidectomy however given young age and 2.5 of methimazole working really well we will avoid at this time

RTC - 6 months

Joel was seen today for thyroid problem.

Diagnoses and all orders for this visit:

Hyperthyroidism
- TSH, Blood - See Instructions; Future
- Free Thyroxine, Blood Green Plasma Separator Tube; Future

- Total T3, Blood Green Plasma Separator Tube; Future
- Thyroid Stimulating Immunoglobulin (TSI) SST; Future
- TSH Receptor Antibody (TRAB), Blood Yellow serum separator tube; Future
- endo 6 mo fu no preference; Future

Graves disease
- TSH, Blood - See Instructions; Future
- Free Thyroxine, Blood Green Plasma Separator Tube; Future
- Total T3, Blood Green Plasma Separator Tube; Future
- Thyroid Stimulating Immunoglobulin (TSI) SST; Future
- TSH Receptor Antibody (TRAB), Blood Yellow serum separator tube; Future
- endo 6 mo fu no preference; Future

I personally spent 30 total minutes in face-to-face and non-face-to-face activities related to the patient's visit today, excluding interpretation services and any separately reportable services/procedures
Visit and the total time pre charting and coordinating care included total of 30 min.

**HPI: **Joel Paul Polizzi is a 39 year old male with graves' disease

*Diagnosis made around feb 2024 by PCP *
*Started methimazole 2/5/24 and propanolol 60 ER prn for tremors *
*Repeat testing show improvement of TFT *

*Briefly off of methimazole may 2024- June 26 2024 due to hypothyrodism on labs and weight gain 5-10 labs *
* *

*Reports the first time he went on MMI his tremors and palpitations improved quickly. When he went off the MMI had return of tremors and palpitations about 2 weeks later, hair loss, and also saw an increase of 10 lbs. His symptoms have mildly improved since going back on it about a week ago. *

[image]

*Family history *
*Mom with hypothyroid *
*Paternal aunt with hyperthyroid *

*Symptoms : *
*Fatigue: No *
*Shortness of breath: Mild, a/b palpitations and mild anxiety *
Hyper defecation: No
Tremor: No
*Palpitations: Mild heart rate: 82 *
*Leg swelling: No *
*Shortness of breath /cp: No chest pain *
Smoking: Former smoker, quit 2 years ago (was smoking ~15 years, half pack a day)
Hair loss: Yes
*Weight loss : 5 lbs *
*Neck pain/tender thyroid: No *
Diplopia : No (history of chronic ocular migraines - gets circles around vision)
Dry eyes/injected eyes: No

Fever: No
*Insomnia: Yes, sleep onset insomnia *
Muscle weakness: No

*Recent illnesses: No *
Seizure meds: No

***Meds: ***
*Supplements: No Biotin: No *
*OCP: N/a *
*Kelp/iodine: No *

**Interval **
Patient intermittently still has palpitations but had a normal cardiac workup outside UCSD per his report

Blood pressure a little bit high but he also does not do any exercise
He has a new primary care provider at UC San Diego

Endocrinology, Diabetes and Metabolism

----------(data below generated by Preethika Subashini Ekanayake, MD)----------

***Patient Verification & Telemedicine Consent & Financial Waiver: ***
1. *Identity: I have verified this patient's identity to be accurate.*
2. *Consent: I verify consent has been secured in one of the following methods: (a) **obtained written/ online attestation consent** (via MyChartVideoVisit pathway), (b) **the spoke-side provider has obtained verbal or written consent **from patient/ surrogate (if this is a "provider to provider" evaluation), or (c) in all other cases, **I have personally obtained verbal consent** from the patient/ surrogate (noting all elements below) to perform this **voluntary** telemedicine evaluation (including obtaining history, performing examination and reviewing data provided by the patient). The patient/ surrogate has the **right to refuse** this evaluation. I have explained **risks** (including potential loss of confidentiality), **benefits**, **alternatives**, and the **potential need for subsequent face to face** care. Patient/ surrogate understands that there is a **risk **of medical inaccuracies given that our recommendations will be made based on reported data (and we must therefore assume this information is accurate). Knowing that there is a risk that this information is not reported accurately, and that the telemedicine video, audio, or data feed may be incomplete, the patient agrees to proceed with evaluation and holds us harmless knowing these risks.*
3. *Healthcare Team: The patient/ surrogate has been notified that **other healthcare professionals** (including students, residents and technical personnel) may be involved in this audio-video evaluation. All laws concerning **confidentiality an d patient access** to medical records and copies of medical records apply to telemedicine.*
4. *Privacy: If this is a MyChart Video Visit, the patient/ surrogate has received the **UCSD Notice of Privacy Practices** via E-Checkin process. For all other video visit techniques, I have verbally provided the patient/ surrogate with the UCSD web link in English ([https://health.ucsd.edu/hipaa/Pages/hipaa.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa.aspx \t _blank)) or Spanish ([https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx \t _blank)). The patient/ surrogate acknowledges both being provided the NPP link, and has been offered to have the NPP mailed to the patient/ surrogate by US mail. The patient/ surrogate has voiced understanding an acknowledgement of receipt of this NPP web address. If the patient/surrogate has elected to receive the NPP via US mail, I verify that the NPP will be sent promptly to the patient/surrogate via US mail.*
5. *Capacity: I have reviewed this above verification and consent paragraph with the patient/ surrogate and the patient is **capacitated or has a surrogate**. If the patient is not capacitated to understand the above, and no surrogate is available, since this is not an emergency evaluation, the visit will be rescheduled until such time that the patient can consent, or the surrogate is available to consent. If this is an emergency evaluation and the patient is not capacitated to understand the above, and no surrogate is available, I am proceeding with this evaluation as this is felt to be an emergency setting and no appropriate specialist is available at the bedside to perform these evaluations.*
6. *Financial Waiver: If this is a MyChart Video Visit, the patient has been made aware of the **financial waiver** via E-Checkin process. For all other video visit techniques, an E-Checkin process is not performed. As such, I have personally verbally informed

the patient/ surrogate that this evaluation will be a **billable encounter **similar to an in-person clinic visit, and the patient/ surrogate has agreed to pay the fee for services rendered. If we are billing insurance for the patient's telehealth visit, his out-of-pocket cost will be determined based on his plan and will be billed to him. The patient/ surrogate has also been informed that if the patient does not have insurance or does not wish to use insurance, UC San Diego Health's cash price for a primary care telehealth visit is $59.00 and specialist telehealth visit is $88.00. I have further informed the patient/ surrogate that in the event the patient has additional services provided in conjunction with the specialty visit (Ex. Psychotherapy services), those services will be billed at the current rate less a 45% discount.*
7. Intra-State Location: The patient/ surrogate attests to understanding that if the patient accesses these services from a location outside of California, that the patient does so at the patient's own risk and initiative and that the patient is ultimately responsible for compliance with any laws or regulations associated with the patient's use.
*8. Specific Use:The patient/ surrogate understands that UCSD makes no representation that materials or servicesdelivered via telecommunication services, or listed on telemedicine websites, are appropriate or available for use in any other location. *

JOEL PAUL POLIZZI
MRN: 17948266
DOB: 6/28/1986
PMD: Akhavan, Jamshid

CC: Rash (X1 week nose, x1 month on buttock, possible staph infection/Applied neosporin antibiotic cream/Requesting referral to allergy)

[table#1]:
Chief Complaint
Patient presents with
•	Rash
		X1 week nose, x1 month on buttock, possible staph infection
Applied neosporin antibiotic cream
Requesting referral to allergy

HPI: Joel Paul Polizzi is a 39 year old male who presents with c/o a 4 week history of a rash to the buttock and then a one-week history of a rash to the right nostril. Patient notes that he has had a single lesion on his buttock, for then in the last week or so has developed another 1-2 lesions. He has been applying topical Neosporin to both his nostril and buttock, with only somewhat relief of the nostril rash. He notes the nostril rash has a burning sensation, but he has no pain on the buttock rash. No severe pruritus. No new products. Patient has never had these symptoms before. He does not have a history of HSV. No further complaints. No drainage, nausea, vomiting, fevers, and chills.

PMHx: Past Medical History
PSHx: has a past surgical history that includes Ankle hardware implantation (Right, 03/2011); Colonoscopy (07/27/2020); and Fracture surgery (4/2009).
Meds: has a current medication list which includes the following prescription(s): clotrimazole, methimazole, mupirocin, propranolol, and sulfamethoxazole-trimethoprim.
ALL: Penicillins

Review of Systems
Negative unless otherwise specified in HPI

EXAM
BP (!) 137/94 (BP Location: Left arm, BP Patient Position: Sitting, BP cuff size: Large) | Pulse 78 | Temp 97.9 °F (36.6 °C) (Temporal) | Resp 17 | SpO2 98%

Vital signs: mild hypertension
General: well-developed, well-nourished, nontoxic and non-ill-appearing
Neuro: no focal deficits, cognition normal, alert, speaking full sentences
Head and Face: Atraumatic, normocephalic
Eyes: sclera normal
Ears: Normal to inspection
Nose: Normal to inspection, +yellow crusting lesions right nostril, turbinates mildly erythematous
Neck: Supple

Chest: Non-labored respiration with normal expiration time
Skin: erythematous and scaling lesion (measuring 3 cm x 3 cm) on the right upper buttock with two other small erythematous lesions (5mm). No drainage. No warmth. No discharge. No streaking.

Impression:

[table#2]:
		ICD-10-CM	ICD-9-CM	
1.	**Staph infection **	**B95.8**	**041.10**	**sulfamethoxazole-trimethoprim (BACTRIM DS) 800-160 MG tablet**
				mupirocin (BACTROBAN) 2 % ointment
2.	Tinea	B35.9	110.9	clotrimazole (LOTRIMIN) 1 % cream

MDM:

DDX: Hives, allergic reaction, staph infection, impetigo, HSV, folliculitis, contact dermatitis, tinea, viral exanthem, less likely abscess, cellulitis, I doubt necrotizing fasciitis, TENS, sepsis, vasculitis, meningitis, anaphylaxis

No erythroderma, skin pain, desquamation, petechiae or purpura.

Patient is well appearing, non toxic with stable vital signs complaining of a 4 week history of a rash to the buttock and then a one-week history of a rash to the right nostril. Patient notes that he has had a single lesion on his buttock, for then in the last week or so has developed another 1-2 lesions. He has been applying topical Neosporin to both his nostril and buttock, with only somewhat relief of the nostril rash. He notes the nostril rash has a burning sensation, but he has no pain on the buttock rash. No severe pruritus. No new products. Patient has never had these symptoms before. He does not have a history of HSV. On exam the patient does have a yellow crusting lesion in the right nostril, which appears likely most consistent with a staph infection. Does not appear to be secondary to HSV. Offered swab, but patient deferred. Patient
also had an erythematous and scaling lesion on the right upper buttock with 2 accompanying lesions. Possibly staph, but also could easily be tinea. Patient will take Bactrim twice daily for one-week and apply mupirocin ointment to this there. If his rash on his buttock does not improve in a couple of days with this treatment, he will then try clotrimazole.

Plan:
-See above
-Patient instructed to follow up with PCP within 1 week, as needed.
-Strict ER precautions reviewed. Return precautions discussed. Patient understands and agrees with the plan of care.

Ashley Castelhano, PA-C
UCSD Express Care

Supervising physician for this visit is Dr. Shauna Conry, MD

**Bankers Hill Primary Care Note. **

Joel Paul Polizzi is a 39 year old male with PMH Graves dz who is here for: acute follow up.

Background: history of H. Pylori diagnosed a few months ago with GI, treated, did not complete stool testing to confirm eradication.

Unfortunately 3 weeks ago he began again with epigastric discomfort, feels like "punched in stomach" and "worse than before". Denies nausea, black tarry stools, weight loss, weakness, fatigue, fever, chills.

He has taken tums with some relief temporarily.
He is NOT taking PPI at this time.

He is not sure how he got H. Pylori in the first place.
Denies + household contacts.
He has traveled to Mexico a handful of times.

Review Of Systems:

ROS was done and was negative except as documented above in HPI

PHYSICAL THERAPY DAILY TREATMENT NOTE

Ordering Physician: Akhavan, Jamshid

Visit Diagnosis:
[table#1]:
		ICD-10-CM	ICD-9-CM	
1.	**Chronic pain of right ankle **	**M25.571**	**719.47**	
		G89.29	**338.29**	

Visit Number: 2 ?

Insurance: UNITED HEALTHCARE

Past Medical History

Past Surgical History

Allergies: Penicillins

[table#2]:
•	methIMAzole	Take 0.5 tablets (2.5 mg) by mouth daily.	90 tablet	3
•	propranolol	Take 1 tablet (10 mg) by mouth 3 times daily as needed (If HR resting is over 90 beats per min).	270 tablet	0

Start of Care: 10/16/2025

?

Weeks since Surgery/Injury/Delivery (0 if N/A): 0

SUBJECTIVE

Subjective information: Patient reports ankle always feels irritated

Pain levels:
Location: Right ankle
Intensity:
Current: 3/10
Quality:

OBJECTIVE

?

Manual Therapy (97140):
Jt mobs all planes Right foot grade 3

TherEx (97110):
Bike L5 x 5 min slant board str ,Hamstring stretch ,lunge on step standing eversion,single leg stance all 1 min

ASSESSMENT

Patient making slow progress as evidenced by cont ankle pain . Patient presents with deficits involving **Right ankle **which demonstrates the need for continued skilled care to address impairments to reach goals set in plan of care and to return to previous level of function**.**

Plan for next visit: Continue with PRE

Goals
Goal 1 Impairment: Education need
Goal 1: Patient able to return demonstrate Home Exercise Program independently to enable patient to achieve stated functional goals
Number of Visits: 1-3
Status :Continue

Goal 2 Impairment: Range of motion limitations
Goal 2: Patient to improve R ankle dorsiflexion to at least neutral with knee extended.
Number of Visits: 5-7
Status: Continue

Long Term Goal Impairment: Activity Tolerance Limitation
Long Term Goal: Patient able to ambulate for 3 miles on even terrain with <3/10 R ankle and foot pain.
Number of Visits: 10-14
Status: Continue

Long Term Goal Outcome: Patient will improve LEFS by MCID of at least +9 to reflect clinically significant positive change in function since starting therapy

Number of Visits: 10-14
Status: Continue

Long Term Goal Impairment: Activity Tolerance Limitation
Long Term Goal: Patient able to ambulate at least 20 mins on uneven terrain with <3/10 R ankle and foot pain.
Number of Visits: 10-14
Status: Continue

PLAN
Continue therapy to address: Activity tolerance limitation;Strength impairment;Range of motion limitation;Pain;Decline in functional ability
Treatment Frequency: 2 times per month
Treatment Duration: 12 weeks

Past Medical History:
[table#3]:
Diagnosis	Date
•	Graves disease	
•	Tinnitus

**ENDOCRINE follow up **

Reason for consult:
No chief complaint on file.

ASSESSMENT/RECOMMENDATIONS:

Assessment ** **
Joel Paul Polizzi is a 39 year old male who presents for evaluation of new Graves disease.

Graves disease
Diagnosed Feb 2024, started on methimazole. Was taken off for about a month due to hypothyroid labs and has come back on the medication in early July 2024. Symptoms now resolved. Discussed prognosis of disease and treatment options including definitive treatment with surgery. Discussed also that 1/3 of patients achieve remission with MMI within 1-2 years. Given he was started on MMI fairly recently in February 2024, will plan to continue for now.

Plan ** **
- tft improving and some low thyroid symptoms and tsh 4 -- reduce to 2.5 mg methimazole

- labs great now

- labs 2nd week December - with future labs around feb or march 2026 recheck antibodies
Grad school extended by one more year so during atht time if needs surgery (ie not going into remission, he prefer that here)

- bedside US below

RTC - April 2026

Diagnoses and all orders for this visit:

Graves disease
- TSH, Blood - See Instructions; Future
- Free Thyroxine, Blood Green Plasma Separator Tube; Future
- Total T3, Blood Green Plasma Separator Tube; Future
- methIMAzole (TAPAZOLE) 5 MG tablet; Take 0.5 tablets (2.5 mg) by mouth daily.
- endo 6 mo fu no preference; Future

Other orders
- endo 6 mo fu no preference

I personally spent 30 total minutes in face-to-face and non-face-to-face activities related to the patient's visit today, excluding interpretation services and any separately reportable services/procedures
Visit and the total time pre charting and coordinating care included total of 30 min.

**HPI: **Joel Paul Polizzi is a 39 year old male with graves' disease

*Diagnosis made around feb 2024 by PCP *
*Started methimazole 2/5/24 and propanolol 60 ER prn for tremors *
*Repeat testing show improvement of TFT *

*Briefly off of methimazole may 2024- June 26 2024 due to hypothyrodism on labs and weight gain 5-10 labs *
* *

*Reports the first time he went on MMI his tremors and palpitations improved quickly. When he went off the MMI had return of tremors and palpitations about 2 weeks later, hair loss, and also saw an increase of 10 lbs. His symptoms have mildly improved since going back on it about a week ago. *

[image]

*Family history *
*Mom with hypothyroid *
*Paternal aunt with hyperthyroid *

*Symptoms : *
*Fatigue: No *
*Shortness of breath: Mild, a/b palpitations and mild anxiety *
Hyper defecation: No
Tremor: No
*Palpitations: Mild heart rate: 82 *
*Leg swelling: No *
*Shortness of breath /cp: No chest pain *
Smoking: Former smoker, quit 2 years ago (was smoking ~15 years, half pack a day)
Hair loss: Yes
*Weight loss : 5 lbs *
*Neck pain/tender thyroid: No *
Diplopia : No (history of chronic ocular migraines - gets circles around vision)
Dry eyes/injected eyes: No
Fever: No
*Insomnia: Yes, sleep onset insomnia *
Muscle weakness: No

*Recent illnesses: No *
Seizure meds: No

***Meds: ***
*Supplements: No Biotin: No *
*OCP: N/a *
*Kelp/iodine: No *

**Interval **

- saw Ophthalmology 9/30/24, no eye disease
Labs look great on 5mg
Some low thyroid symptoms so will reduce

Some intermittent palpitations
July - cardiac work up all within normal limits

ROS:
ROS negative except for what is noted above in HPI

----------(data below generated by Preethika Subashini Ekanayake, MD)----------

***Patient Verification & Telemedicine Consent & Financial Waiver: ***
1. *Identity: I have verified this patient's identity to be accurate.*
2. *Consent: I verify consent has been secured in one of the following methods: (a) **obtained written/ online attestation consent** (via MyChartVideoVisit pathway), (b) **the spoke-side provider has obtained verbal or written consent **from patient/ surrogate (if this is a "provider to provider" evaluation), or (c) in all other cases, **I have personally obtained verbal consent** from the patient/ surrogate (noting all elements below) to perform this **voluntary** telemedicine evaluation (including obtaining history, performing examination and reviewing data provided by the patient). The patient/ surrogate has the **right to refuse** this evaluation. I have explained **risks** (including potential loss of confidentiality), **benefits**, **alternatives**, and the **potential need for subsequent face to face** care. Patient/ surrogate understands that there is a **risk **of medical inaccuracies given that our recommendations will be made based on reported data (and we must therefore assume this information is accurate). Knowing that there is a risk that this information is not reported accurately, and that the telemedicine video, audio, or data feed may be incomplete, the patient agrees to proceed with evaluation and holds us harmless knowing these risks.*
3. *Healthcare Team: The patient/ surrogate has been notified that **other healthcare professionals** (including students, residents and technical personnel) may be involved in this audio-video evaluation. All laws concerning **confidentiality and patient access** to medical records and copies of medical records apply to telemedicine.*
4. *Privacy: If this is a MyChart Video Visit, the patient/ surrogate has received the **UCSD Notice of Privacy Practices** via E-Checkin process. For all other video visit techniques, I have verbally provided the patient/ surrogate with the UCSD web link in English ([https://health.ucsd.edu/hipaa/Pages/hipaa.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa.aspx \t _blank)) or Spanish ([https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx \t _blank)). The patient/ surrogate acknowledges both being provided the NPP link, and has been offered to have the NPP mailed to the patient/ surrogate by US mail. The patient/ surrogate has voiced understanding an acknowledgement of receipt of this NPP web address. If the patient/surrogate has elected to receive the NPP via US mail, I verify that the NPP will be sent promptly to the patient/surrogate via US mail.*
5. *Capacity: I have reviewed this above verification and consent p
aragraph with the patient/ surrogate and the patient is **capacitated or has a surrogate**. If the patient is not capacitated to understand the above, and no surrogate is available, since this is not an emergency evaluation, the visit will be rescheduled until such time that the patient can consent, or the surrogate is available to consent. If this is an emergency evaluation and the patient is not capacitated to understand the above, and no surrogate is available, I am proceeding with this evaluation as this is felt to be an emergency setting and no appropriate specialist is available at the bedside to perform these evaluations.*
6. *Financial Waiver: If this is a MyChart Video Visit, the patient has been made aware of the **financial waiver** via E-Checkin process. For all other video visit techniques, an E-Checkin process is not performed. As such, I have personally verbally informed the patient/ surrogate that this evaluation will be a **billable encounter **similar to an in-person clinic visit, and the patient/ surrogate has agreed to pay the fee for services rendered. If we are billing insurance for the patient's telehealth visit, his out-of-pocket cost will be determined based on his plan and will be billed to him. The patient/ surrogate has also been informed that if the patient does not have insurance or does not wish to use insurance, UC San Diego Health's cash price for a primary care telehealth visit is $59.00 and specialist telehealth visit is $88.00. I have further informed the patient/ surrogate that in the event the patient has additional services provided in conjunction with the specialty visit (Ex. Psychotherapy services), those services will be billed at the current rate less a 45% discount.*
7. Intra-State Location: The patient/ surrogate attests to understanding that if the patient accesses these services from a location outside of California, that the patient does so at the patient's own risk and initiative and that the patient is ultimately responsible for compliance with any laws or regulations associated with the patient's use.
*8. Specific Use:The patient/ surrogate understands that UCSD makes no representation that materials or servicesdelivered via telecommunication services, or listed on telemedicine websites, are appropriate or available for use in any other location. *

Past Surgical History

Allergies: Penicillins

[table#2]:
•	methIMAzole	Take 1 tablet (5 mg) by mouth daily.	90 tablet	3
•	propranolol	Take 1 tablet (10 mg) by mouth 3 times daily as needed (If HR resting is over 90 beats per min).	270 tablet	0

Start of Care: 10/16/2025

?

SUBJECTIVE

History of Present Illness: 39 year old referred for right ankle pain. Patient states: "I'm here for old ankle injury. There is scar tissue around that site. I don't have good range of motion in that ankle. The bottom of my foot is hurting. Turning my foot in usually hurts. It feels like there's pebbles in my ankle. We walk a few miles on the weekend- it didn't bother me before, now it's starting to bother me. I would have some unsteadiness after standing on it for a while."

Onset date: got worse 6 months
Mechanism of injury: old surgery about 15 years
Symptom progression since onset: worse since 6 months ago
Previous treatment for condition: yes, after surgery for a few months, then nothing else until now

Aggravating factors: getting up in the morning, uneven terrain, jogging, skateboarding (couldn't been on a skateboard for more than 10 mins)
Easing factors: once I get moving or I'm warmed up

Pain Location: bottom of my feet (arch), distal to medial malleolus, medial ankle
Pain Quality: dull
Intensity: Current: 3/10
  At best: 3/10 discomfort
        At worst: 6/10 difficult to walk afterwards

Occupation: I work a desk job.
Hobbies/social: We walk a few miles on the weekend.
Home Environment: No stairs at home.

Fall history: No

Patient goals: I want it to not hurt at the bottom of my feet.

OBJECTIVE

Standing posture:

Heel raise: 25 heel raise
Single leg heel raise: 25 for right with visibly lower height with heel raise, 15 for left
Single leg balance: 30 seconds on left, 30 seconds on right with mild instability and mild to moderate postural stabl

Gait: mild right hip drop > left

[table#3]:
Ankle PROM (degrees)	**Right**	**Left**
Dorsiflexion	-8	Within normal limits
Plantarflexion	32	Within normal limits
Inversion	29	Within normal limits
Eversion	11	Within normal limits

[table#4]:
Ankle Manual Muscle Test	**Right/5**	**Left/5**
Anterior tibialis	2+	5
Gastrocnemius	2+	5
Posterior tibialis	4-	5
Peroneals	4	5

[table#5]:
Muscle Length Test	**Findings**
Gastrocnemius (knee extended; normal 10 deg DF)	-8 degrees
Soleus (with 90 deg knee flex; normal 20 deg DF)	1 degrees

Palpation: tenderness to palpation distal to medial malleolus, posterio tibialis musculature, and plantar fascia

Joint Mobility: hypomobility right PA glide of talocrural joint

[table#6]:
Lower Extremity Functional Scale

LOWER EXTREMITY FUNCTIONAL SCALE
Any of your usual work, housework, or school activities.	Moderate difficulty
Your usual hobbies, re creational or sporting activities.	Quite a bit of difficulty
Getting into or out of the bath.	No difficulty
Walking between rooms.	No difficulty
Putting on your shoes or socks.	No difficulty
Squatting.	No difficulty
Lifting an object, l
ike a bag of groceries from the floor.	No difficulty
Performing light activities around your home.	A little bit of difficulty
Performing heavy activities around your home.	Moderate difficulty
Getting into or out of a car.	No difficulty
Walking 2 blocks.	A little bit of difficulty
Walking a mile.	A little bit of difficulty
Going up or down 10 stairs (about 1 flight of stairs).	Moderate difficulty
Standing for 1 hour.	A little bit of difficulty
Sitting for 1 hour.	No difficulty
Running on even ground.	Quite a bit of difficulty
Running on uneven ground.	Quite a bit of difficulty
Making sharp turns while running fast.	Quite a bit of difficulty
Hopping.	Moderate difficulty
Rolling over in bed.	No difficulty
Uc Amb G Lower Extremity Functional Scale Total (range: 0 - 80)	56

Instructed and performed:
Program : R ankle pain for Joel Polizzi as of 2025-10-23

Plantar/dorsiflexion (Repetitions:20)
Ankles circumduction
Stretching calf sitting (Sets:3 Duration:30)
Calf stretch (Repetitions:3 Hold:30 sec)
Calf stretch on wall (Repetitions:3 Hold:30 sec)
Plantar fascia stretch (Repetitions:3 Hold:30 sec)
Standing soleus stretch (Repetitions:3 Hold:30 sec)
Plantar flexion on two legs (Sets:2 Repetitions:10)
Plantar fascia release (Repetitions:5 mins)

- Discussed using a lacrosse ball to roll on bottom of right foot in sitting for plantar fascia release
- Discussed using arch support insoles
- Performed right PA talocrural glide Grade II-III

ASSESSMENT
Rehabilitation Potential: fair

Patient referred for chronic right ankle pain after right ankle surgery 15 years ago. Deficits include decreased right ankle range of motion, joint mobility, strength, and stability, limiting patient from walking for 3 miles on even terrain, walking on uneven terrain, and waking up with right ankle and bottom of feet pain. Patient will benefit from skilled therapy to address impairments and improve function. Patient was given a home exercise program to begin addressing evaluation findings and was educated on how to perform effectively and safely. Patient was instructed to perform home exercise program as tolerated. Discussed evaluation findings with patient and educated on therapy potential and plan of care.

HOME EXERCISE PROGRAM
Program : R ankle pain for Joel Polizzi as of 2025-10-23

Plantar/dorsiflexion (Repetitions:20)
Ankles circumduction
Stretching calf sitting (Sets:3 Duration:30)
Calf stretch (Repetitions:3 Hold:30 sec)
Calf stretch on wall (Repetitions:3 Hold:30 sec)
Plantar fascia stretch (Repetitions:3 Hold:30 sec)
Standing soleus stretch (Repetitions:3 Hold:30 sec)
Plantar flexion on two legs (Sets:2 Repetitions:10)
Plantar fascia release (Repetitions:5 mins)

Plan for next visit:
Right ankle range of motion and strengthening
Ankle stability

Goals
Goal 1 Impairment: Education need
Goal 1: Patient able to return demonstrate Home Exercise Program independently to enable patient to achieve stated functional goals
Number of Visits: 1-3
Status :Continue

Goal 2 Impairment: Range of motion limitations
Goal 2: Patient to improve R ankle dorsiflexion to at least neutral with knee extended.
Number of Visits: 5-7
Status: Continue

Long Term Goal Impairment: Activity Tolerance Limitation
Long Term Goal: Patient able to ambulate for 3 miles on even terrain with <3/10 R ankle and foot pain.
Number of Visits: 10-14
Status: Continue

Long Term Goal Outcome: Patient will improve LEFS by MCID of at least +9 to reflect clinically significant positive change in function since starting therapy

Number of Visits: 10-14
Status: Continue

Long Term Goal Impairment: Activity Tolerance Limitation
Long Term Goal: Patient able to ambulate at least 20 mins on uneven terrain with <3/10 R ankle and foot pain.
Number
of Visits: 10-14
Status: Continue

PLAN
Continue therapy to address: Activity tolerance limitation;Strength impairment;Range of motion limitation;Pain;Decline in functional ability
Treatment Frequency: 2 times per month
Treatment Duration: 12 weeks

Type of Eval
Low Complexity (97161): Completed
Total TIMED Treatment (min) Therapeutic Activities (97530): 9
Total TIMED Treatment (min) Therapeutic Exercise (97110): 18

Treatment Time
Total TIMED Treatment (min): 30
Total Treatment Time (min): 50

Therapist and Patient discussed treatment plan for

	•	Unable to Pay for Housing in the Last Year: No
	•	Number of Times Moved in the Last Year: 0
	•	Homeless in the Last Year: No

**Assessment and Plan: **

1. Annual physical exam (Primary)
Est 39 year old M returns for CPE
Labs: reviewed, UTD
Vaccines: flu shot today
Start CRC at 45, PSA at 50
Age appropriate counseling provided including lifestyle management, metabolism changes with thyroid dz
All questions answered

2. Need for vaccination
Due for flu shot, given today
Vaccination:
- Flu Vaccine (Fluarix), IM, 6+ mo

3. Graves disease
Chronic, stable, on methimazole
Labs UTD and reviewed
Appreciate endocrinology recommendations, has f/u upcoming
Education provided to answer his questions

4. Acute right ankle pain
New, acute
Pt has hx of ankle surgery with pins -> recently more active, suspect compensatory strain of support structures
Recommend PT course
Referral:
- Consult/Referral to UC Physical Therapy - Internal

5. Elevated blood pressure reading
BP elevated in office, recommend periodic home measurements to evaluate and monitor, BP return precuations reviewed if >140/90 consistently notify MD

Jamshid Akhavan, MD

Progress Notes - documented in this encounter

Aaron Benjamin Schneir - 07/29/2025 8:30 AM PDT

Formatting of this note might be different from the original.

39-year-old male history of Graves disease has a occasionally had episodes of low back strain was leaning over and felt acute pain recently use ibuprofen yesterday no self-treatment today has pain with movement
No fevers no history of cancer
No history of IV drug use
No incontinence retention
Is ambulatory
Able to tolerate NSAIDs per patient
Some pain down right back not beyond knee

Had CT scan abdomen pelvis 10/24 bones noted to be normal

Allergies: Penicillin
Past medical history: Essential tremor, Graves disease
Medications: Methimazole

Alert afebrile
No percussion tenderness midline L-spine no rash on back
5/5 motor strength bilateral knee ankle big toe flexion-extension
Straight leg raise elicits back pain and spasm no radicular symptoms
Steady gait
Positional movements reproduce back pain

Impression/plan
Low back strain
-May have element of sciatica will treat with ketorolac IM Will DC with the acetaminophen and ibuprofen DC with return precautions patient happy with the plan

I personally spent total 16 minutes in face-to-face and non-face-to-face activities related to the patient's visit today, excluding any separately reportable services/procedures

**Bankers Hill Primary Care Note. **

Joel Paul Polizzi is a 38 year old male with PMH Graves disease who is here for: ED follow up - transfer of care.

Previously followed by TORRES -> transferring to AKHAVAN.

Per ED notes: he was watching TV and developed a twinge in chest -> chest heaviness -> radiated to L arm -> palpitations. He had EKG, labs, CXR and troponin completed and discharged.

Due to palpitations, he was referred to outside cardiologist - had echocardiogram and heart monitor placed (still on now).

Palpitations during onset lasted minutes and have not recurred.

He is followed by endocrinology for Graves dz on methimazole.

He has questions regarding HTN stages and indications for medication.

Has hx of ankle surgery in the past.

Review Of Systems:

A complete ROS was done and was negative except as documented above in HPI

**Assessment and Plan: **

1. Transition of care (Primary)
38 year old M presents to transfer care TORRES -> AKHAVAN and for ED transition of care
ED notes reviewed, health histories, medications reconciled and ED course

2. Palpitations
New, acute, resolved, currently asymptomatic
Continue heart monitor placed by outside cardiologist
Request records from cardiology (external) including echocardiogram
Appreciate specialist recommendations
Return/ED precautions reviewed

3. Graves disease
Chronic, stable, TFTs wnl , followed by endocrinology
Continue methimazole
Appreciate specialist recommendations

4. Stage 1 hypertension
Counseled pt on definitions for each stage of HTN
At this stage, BP in 130s -> recommend DASH diet, avoid stimulants and regular exercise
Keep regular BP log and return precautions reviewed

(ABNORMAL) THYROID STIMULATING IMMUNOGLOBULIN (TSI)-ARUP - Final result (06/05/2025 8:41 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Thyroid Stimulating Immunoglobulin-TSI-ARUP	**3.14 (H)**	<=0.54 [IU]/L		06/07/2025 12:15 PM PDT	ARUP	

Comment:

```
INTERPRETIVE INFORMATION: Thyroid Stimulating Immunoglobulin
                          (TSI)
0.54 IU/L or less.........Consistent with healthy thyroid function
or non-Graves thyroid or autoimmune disease. Those with healthy
thyroid function typically have results less than 0.1 IU/L.
0.55 IU/L or greater......Consistent with Graves disease
(autoimmune hyperthyroidism)
This assay specifically detects thyroid stimulating
autoantibodies. For diagnostic purposes, the results obtained from
this assay should be used in combination with clinical
examination, patient medical history, and other findings.

[table#2]:
HPI

Joel Paul Polizzi is a 38 year old male who presents to the ED with** CC:** Chest Pain - Adult (Pt ambulates to ER with c/o 1/10 chest pain but pain was at a 8/10 at the height of his pain. Pt has a HX of graves disease.)

Patient presents to the emergency department complaining of 1/10 chest pain. The patient was watching TV with his wife when he developed a twinge in his test which developed into in his some chest heaviness radiating to his left arm he developed palpitations as well initially it was concerned that he was having a heart attack but now he thinks he might have been having a panic attack. The patient states he has a history of Graves disease and gets occasional palpitations but is otherwise well-controlled on methimazole he denies fevers chills cough congestion abdominal pain nausea vomiting weakness numbness.

COURSE/MEDICAL DECISION MAKING
Course:
Joel Paul Polizzi presented to the Emergency Department by walk in for evaluation. I reviewed the nursing notes.
EMERGENT LABS AND DIAGNOSTIC STUDIES:
LAB RESULTS WERE REVIEWED AND INTERPRETED BY ME:

12-LEAD EKG INTERPRETATION BY ME:
Normal Sinus Rhythm with ventricular rate of 73 beats per minute
Normal axis
Normal intervals
No acute ST or T wave changes suggestive of acute ischemia or STEMI.

RADIOLOGY RESULTS REVIEWED
[table#13]:
X-Ray Chest Single View
Final Result
IMPRESSION:
No acute process.

NURSING NOTES REVIEWED.
PREVIOUS MEDICAL RECORDS REVIEWED VIA THE ELECTRONIC HEALTH RECORD AND WERE SUMMARIZED IN HPI AND BELOW.

EMERGENCY DEPARTMENT COURSE
Based on chief complaint, I ordered saline lock, cardiac monitoring, pulse oximetry

OBSERVATION/RE-EVALUATION/CONSULTATIONS:

MEDICAL DECISION MAKING:
Patient presents with chest pain. Patient had saline lock placed and was placed on continuous cardiopulmonary monitoring and pulse oximetry.

I considered high risk diagnoses such as acute myocardial infarction, pulmonary embolism, aortic dissection, pericarditis/ myocarditis, pneumothorax, and pneumonia among other diagnoses and I reviewed the ECG for ischemia, arrhythmia, myocardial disease or other
cardiac abnormality.

I independently reviewed the labs and CXR images with CXR showing no evidence of pneumonia, pneumothorax or widened mediastinum

Pulmonary embolism unlikely for the following reasons:
Patient with low pretest probability per Wells or clinical gestalt (<15 percent) and was PERC negative.

Dissection unlikely and no further work-up performed for the following reasons: low probability by history/physical

Pericarditis unlikely as no evidence on history, PE or EKG.

Patient underwent evaluation for ACS. The HEART pathway/score was utilized for risk stratification and found to be less than or equal to 3. Repeat EKG and troponin @ 3 hours were not consistent with acute myocardial infarction/ischemia. Based on this evaluation the patient's risk of major adverse cardiac events is <1%. Shared decision making occurred with the patient and they will discuss with PMD/Cardiology within 72 hours regarding outpatient management.

HS TROPONIN I - Final result (06/01/2025 11:01 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
TROPONIN I [TROPI]	9	<76 ng/L		06/01/2025 11:28 PM PDT	EAST CAMPUS MEDICAL CENTER	

Comment:

```
High-sensitivity Troponin I (hsTnI) assay can reliably detect low troponin
concentrations relative to conventional troponin assays. It is the preferred
marker of myocardial necrosis as recommended by the Fourth Universal
Definition of Myocardial Infarction Guidelines.

The diagnosis of acute myocardial infarction (AMI) is made based on a rise
or fall of troponin with at least one measurement exceeding the laboratory's
upper limit of normal(indicating myocardial injury), in the context of
reasonable suspicion for coronary ischemia (e.g. typical symptoms, changes
on ECG, evidence for loss of myocardial function or demonstration of
obstructive coronary artery disease).

NOTE: Although abnormal hsTnI values reflect INJURY to myocardial cells, an
elevated hsTnI does not indicate the CAUSE of injury (i.e. ischemia versus
non-ischemic disease).

In some cases, myocardial injury is chronic and relatively stable such that
hsTnI values remain elevated but do not change substantially over hours to
days (examples include chronic kidney disease, heart failure or advanced
patient age).

When determining whether there has been a significant rise or fall of
troponin on serial sampling, absolute change in troponin concentration has
greater diagnostic accuracy for AMI than relative change criteria. A change
of >7 ng/L over a 2-hour interval or a change of >10 ng/L over a 3-hour
interval is suggested as a significant change. If the initial hsTnI is below
or slightly above the 99th percentile upper reference limit, a 50% change
from the baseline is considered significant. If the initial hsTnI is above
the 99th percentile upper reference limit, a 20% change from the baseline
value is considered significant.

PRO BNP, BLOOD - Final result (06/01/2025 10:01 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
ProBNP	<36	0 - 449 pg/mL		06/01/2025 10:43 PM PDT	EAST CAMPUS MEDICAL CENTER	

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature

Comment:
The ProBNP test should not be used as absolute evidence for congestive heart failure (CHF). The results should be interpreted along with clinical findings and other laboratory test results. Blood concentrations of ProBNP may be elevated in patients who are experiencing a myocardial infarction, in patients that are candidates for renal dialysis, in patients that have had renal dialysis, and in one out of four female patients that are greater than 75 years of age.

Progress Notes - documented in this encounter

Preethika Subashini Ekanayake - 04/14/2025 8:30 AM PDT
Formatting of this note might be different from the original.
**ENDOCRINE follow up **

Reason for consult:
No chief complaint on file.

ASSESSMENT/RECOMMENDATIONS:

Assessment ** **
Joel Paul Polizzi is a 38 year old male who presents for evaluation of new Graves disease.

Graves disease
Diagnosed Feb 2024, started on methimazole. Was taken off for about a month due to hypothyroid labs and has come back on the medication in early July 2024. Symptoms now resolved. Discussed prognosis of disease and treatment options including definitive treatment with surgery. Discussed also that 1/3 of patients achieve remission with MMI within 1-2 years. Given he was started on MMI fairly recently in February, will plan to continue for now.

Plan ** **
- Continue current dose of methimazole 5 mg once daily

- labs great now

- recheck fist week of may

- will check antibodies since now a little over 1 year from diagnosis and meds
If in remission push forward with meds for 6-12 more months then break

- bedside US below

RTC 6 months

Joel was seen today for follow up and thyroid problem.

Diagnoses and all orders for this visit:

Graves disease
- endo 6 mo fu no preference
- TSH, Blood - See Instructions; Future
- Free Thyroxine, Blood Green Plasma Separator Tube; Future
- Total T3, Blood Green Plasma Separator Tube; Future
- Thyroid Stimulating Immunoglobulin (TSI) SST; Future
- TSH Receptor Antibody (TRAB), Blood Yellow serum separator tube; Future
- endo 6 mo fu no preference; Future

I personally spent 30 total minutes in face-to-face and non-face-to-face activities related to the patient's visit today, excluding interpretation services and any separately reportable services/procedures
Visit and the total time pre charting and coordinating care included total of 30 min.

**HPI: **Joel Paul Polizzi is a 38 year old male with graves' disease

*Diagnosis made around feb 2024 by PCP *
*Started methimazole 2/5/24 and propanolol 60 ER prn for tremors *
*Repeat testing show improvement of TFT *

*Briefly off of methimazole may 2024- June 26 2024 due to hypothyrodism on labs and weight gain 5-10 labs *
* *

*Reports the first time he went on MMI his tremors and palpitations improved quickly. When he went off the MMI had return of tremors and palpitations about 2 weeks later, hair loss, and also saw an increase of 10 lbs. His symptoms have mildly improved since going back on it about a week ago. *

[image]

*Family history *
*Mom with hypothyroid *
*Paternal aunt with hyperthyroid *

*Symptoms : *
*Fatigue: No *
*Shortness of breath: Mild, a/b palpitations and mild anxiety *
Hyper defecation: No
Tremor: No
*Palpitations: Mild heart rate: 82 *
*Leg swelling: No *
*Shortness of breath /cp: No chest pain *
Smoking: Former smoker, quit 2 years ago (was smoking ~15 years, half pack a day)
Hair loss: Yes
*Weight loss : 5 lbs *
*Neck pain/tender thyroid: No *
Diplopia : No (history of chronic ocular migraines - gets circles around vision)
Dry eyes/injected eyes: No
Fever: No
*Insomnia: Yes, sleep onset insomnia *
Muscle weakness: No

*Recent illnesses: No *
Seizure meds: No

***Meds: ***
*Supplements: No Biotin: No *
*OCP: N/a *
*Kelp/iodine: No *

**Interval **

- saw Ophthalmology 9/30/24, no eye disease
Labs look great on 5mg

Tsh 2.3

Narrative

```
UCSD PATHOLOGY SYSTEMS - 04/15/2025 8:32 AM PDT
FINAL PATHOLOGIC DIAGNOSIS:
A: Duodenum, biopsy:
-Duodenal mucosa with foveolar metaplasia involved by Helicobacter pylori
and chronic inflammation.
SPECIMEN(S) SUBMITTED:
A: Duodenal biopsies
CLINICAL HISTORY:
Abnormal CT
INTRAOPERATIVE CONSULTATION (Frozen Section Diagnosis):
Not Applicable
GROSS DESCRIPTION:
A: The specimen received in formalin labeled with the patient's name, DOB,
and "duodenal biopsies" consists of six tan-pink friable fragments of soft
tissue measuring 0.3 up to 0.7 cm in greatest dimension. The specimen is
filtered and entirely submitted in two cassettes, A1-A2.
NGM 04/11/2025
Grossed at Jacobs Medical Center
ACCESSION NUMBER: HCS-25-13183
UC San Diego Health Clinical Laboratories
La Jolla, 9300 Campus Point Dr., La Jolla, CA 92037.
Hillcrest, 200 W Arbor Dr., San Diego, CA 92103-1911.
ECOB, 9444 Medical Center Drive, San Diego, CA 92037.
The technical component procedures of all reported pathology services are
performed at La Jolla, unless otherwise specified.
CONFIDENTIAL HEALTH INFORMATION: Health Care information is personal and
sensitive information. If it is being faxed to you it is done so under
appropriate authorization from the patient or under circumstances that do
not require patient authorization. You, the recipient, are obligated to
maintain it in a safe, secure and confidential manner. Re-disclosure
without additional patient consent or as permitted by law is prohibited.
Unauthorized re-disclosure or failure to maintain confidentiality could
subject you to penalties described in federal and state law.  If you have
received this report or facsimile in error, please notify the UCSD
Pathology Department immediately and destroy the received document(s).
Final Diagnosis performed by Jingjing Hu M.D., Ph.D. (65048) Electronically
signed 4/15/25 8:32   Interpretation performed at UC SAN DIEGO HEALTH ECOB,
9444 MEDICAL CENTER DR, LA JOLLA, CA, 92037 Electronic Signature derived
from a single controlled access password.

Cannot display prior to admission medications because the patient has not been admitted in this contact.

There were no vitals taken for this visit.
General: Well developed, well nourished, in no apparent distress.
Lungs: Clear breath sounds bilaterally.
CV: Normal rate, regular rhythm, no significant murmur present.
Abdomen: Soft, nontender, normal bowel sounds present.

ASA Score: 2
Airway (Mallimpati) Score: Class II - Soft palate, uvula, and fauces are visible.

Assessment and Plan
Proceed to planned procedure.

The patient has consented to the procedure, which will be done with sedation. I have assessed the patient's status immediately prior to this procedure. I have discussed pain management needs and options for the patient with the patient or caregiver.

The patient agrees to be full code for the duration of the procedure.

Sedation options, risks, and plans have been discussed with the patient or caregiver. Questions were answered. The patient or caregiver agrees to proceed as planned.

Imaging:
10/18/2024 Ct AP
IMPRESSION:
Small polyps within the 2nd portion of the duodenum. Direct visualization may
be of benefit.

GI procedures
07/27/2020 colonoscopy
FINDINGS
Excellent bowel prep. Normal terminal ileum, biopsied. Normal colon throughout. Small, non-bleeding internal hemorrhoids.
FINAL PATHOLOGIC DIAGNOSIS:
A: Terminal ileum, biopsy:
-Ileal mucosa with no diagnostic alteration.

**Impression/Plan: **Joel Paul Polizzi is a 38 year old male seen in G clinic due to abnormal imaging done in ER

#Abnormal CT

Recommend EGD for endoscopic evaluation

#Colon cancer screening
Repeat colonoscopy at age 45

RTC as needed

Electronically signed by Jeremy R Flowers at 01/28/2025 8:18 AM PST

Medications
lidocaine (XYLOCAINE) 2 % viscous solution 10 mL (10 mL Oral Given 10/17/24 2358)
aluminum-magnesium-simethicone (MAG-AL PLUS) 200-200-20 MG/5ML suspension 30 mL (30 mL Oral Given 10/17/24 2358)
iohexol (OMNIPAQUE 350) 350 MG/ML solution 100 mL (100 mL IntraVENOUS Given 10/18/24 0510)

Medical Decision Making/Assessment/Plan

This is a(n) 38 year old male w
ho has a past medical history of Graves disease and Tinnitus. and presents with epigastric pain that is non-radiating. Abd is soft and he does not have any recent alcohol use. Will rule out pancreatitis and hepatobiliary cause of his symptoms. Other considerations include gastritis or peptic ulcer. Will give a gi cocktail to see if symptoms improve. Disposition pending evaluation.

Narrative

10/18/2024 5:48 AM PDT
Radiation Dose CTDIVOL = 15.55 (mGy): DLP = 796 (mGy-cm)

PROCEDURE INFORMATION:
Exam: CT Abdomen And Pelvis With Contrast
Exam date and time: 10/18/2024 4:47 AM
Age: 38 years old
Clinical indication: Other: . ; Additional info: Continued epigastric pain

TECHNIQUE:
Imaging protocol: Computed tomography of the abdomen and pelvis with contrast.
Radiation optimization: All CT scans at this facility use at least one of these dose optimization techniques: automated exposure control; mA and/or kV adjustment per patient size (includes targeted exams where dose is matched to clinical indication); or iterative reconstruction.
Contrast material: OMNI 350; Contrast volume: 100 ml; Contrast route: INTRAVENOUS (IV);

COMPARISON:
US ABDOMEN LIMITED 10/18/2024 1:49 AM

RADIATION DOSE METRICS:
CTDI volume (mGy): 15.55
Total DLP (mGy-cm): 796

FINDINGS:
Liver: Normal. No mass.
Gallbladder and biliary ducts: Normal. No calcified stones. No ductal dilation.
Pancreas: Normal. No ductal dilation.
Spleen: Normal. No splenomegaly.
Adrenal glands: Normal. No mass.
Kidneys and ureters: Normal. No hydronephrosis.
Stomach and bowel: Small polyps within the 2nd portion of the duodenum. No obstruction. No mucosal thickening.
Appendix: No evidence of appendicitis.

Intraperitoneal space: Unremarkable. No free air. No significant fluid collection.
Vasculature: Unremarkable. No abdominal aortic aneurysm.
Lymph nodes: Unremarkable. No enlarged lymph nodes.
Urinary bladder: Unremarkable as visualized.
Reproductive: Unremarkable as visualized.
Bones/joints: Unremarkable. No acute fracture.
Soft tissues: Unremarkable.

**ENDOCRINE follow up **

Reason for consult:
[table#1]:
Chief Complaint
Patient presents with
•	Thyroid Problem
		Pt here for f/u with Graves

ASSESSMENT/RECOMMENDATIONS:

Assessment ** **
Joel Paul Polizzi is a 38 year old male who presents for evaluation of new Graves disease.

Graves disease
Diagnosed Feb 2024, started on methimazole. Was taken off for about a month due to hypothyroid labs and has come back on the medication in early July 2024. Symptoms now resolved. Discussed prognosis of disease and treatment options including definitive treatment with surgery. Discussed also that 1/3 of patients achieve remission with MMI within 1-2 years. Given he was started on MMI fairly recently in February, will plan to continue for now.

Plan ** **
- Continue current dose of methimazole 5 mg once daily
- Repeat labs in 2 months around December 2024: TSH, free T4, total T3

- RTC in 6 months

Patient prefer thyroidectomy if ongoing thyroiditis without remission with methimazole after 1.5 -2 yrs

Joel was seen today for thyroid problem.

Diagnoses and all orders for this visit:

Graves disease
- endo f2f fu 4 months
- TSH, Blood - See Instructions; Future
- Free Thyroxine, Blood Green Plasma Separator Tube; Future
- Total T3, Blood Green Plasma Separator Tube; Future
- endo 6 mo fu no preference; Future

**HPI: **Joel Paul Polizzi is a 38 year old male with graves' disease

*Diagnosis made around feb 2024 by PCP *
*Started methimazole 2/5/24 and propanolol 60 ER prn for tremors *
*Repeat testing show improvement of TFT *

*Briefly off of methimazole may 2024- June 26 2024 due to hypothyrodism on labs and weight gain 5-10 labs *
* *

*Reports the first time he went on MMI his tremors and palpitations improved quickly. When he went off the MMI had return of tremors and palpitations about 2 weeks later, hair loss, and also saw an increase of 10 lbs. His symptoms have mildly improved since going back on it about a week ago. *

[image]

*Family history *
*Mom with hypothyroid *
*Paternal aunt with hyperthyroid *

*Symptoms : *
*Fatigue: No *
*Shortness of breath: Mild, a/b palpitations and mild anxiety *
Hyper defecation: No
Tremor: No
*Palpitations: Mild heart rate: 82 *
*Leg swelling: No *
*Shortness of breath /cp: No chest pain *
Smoking: Former smoker, quit 2 years ago (was smoking ~15 years, half pack a day)
Hair loss: Yes
*Weight loss : 5 lbs *
*Neck pain/tender thyroid: No *
Diplopia : No (history of chronic ocular migraines - gets circles around vision)
Dry eyes/injected eyes: No
Fever: No
*Insomnia: Yes, sleep onset insomnia *
Muscle weakness: No

*Recent illnesses: No *
Seizure meds: No

***Meds: ***
*Supplements: No Biotin: No *
*OCP: N/a *
*Kelp/iodine: No *

**Interval **
- last visit consultation
- reduced methimazole to 7.5 mg. Then in August again cut down to 5 mg methimazole
- saw Ophthalmology 9/30/24, no eye disease
- adherent to current dose of methimazole, has not required propranolol in over a month
- steadily regaining weight; denies palpitations, nausea, vomiting, abdominal discomfort, vision changes, neck pain

Latest labs 10/11/24 show TSH suppressed 0.01 by free T4 normal but slightly higher than August and TOTAL T3 normal

ROS:
ROS negative except for what is noted above in HPI

Progress Notes - documented in this encounter

Bobby S Korn - 09/30/2024 8:00 AM PDT

Formatting of this note might be different from the original.

Joel Paul Polizzi is a 38 year old male who prevents for evaluation of TED.

Thyroid Disease History:
- diagnosed in 2024 with hyperthyroidism found to have Graves' Disease
- treated previously with MMZ
- currently treated with MMZ
- labs stable? [ ] Yes; [x] No [ ] NA
- medications stable? [ ] Yes; [x] No [ ] NA
- smoking? Former - quit 2 years ago (for 15 years)

TED History:
- first visit to assess orbits today? [x] Yes; [ ] No
- diagnosed in 2024 not due to orbital symptoms.
- diagnosed as initial presentation of thyroid disease? Yes
- treated previously with MMZ
- prior surgeries: [ ] Yes; [x] No
- Treated with teprotumumab - [ ] Yes; [x] No
- if yes:

- # of infusions:
- date of last infusion:
- side effects:
- prior audiogram? [ ] Yes ; [ ] No; date:

Other PMH:
[x] None
[ ] Pregnancy
[ ] IBD
[ ] Diabetes
[ ] Hearing changes
[ ] Other autoimmune disease
[ ] Other

POHx: None

Interval History:
Currently endorses headache with periorbital radiation.

Subjective overall evaluation:
[ ] Better
[ ] Worse
[ ] Same
[x] NA (first evaluation)

Current symptoms
*Ocular surface: *
[ ] none
[x] light sensitivity
[ ] burning
[ ] FBS
[ ] tearing
[ ] dryness

Diplopia:
[x] none
[ ] gaze induced
[ ] intermittent primary
[ ] constant primary

CAS:
[ ] Spontaneous orbital pain in past 4 weeks
[ ] Gaze-evoked orbital pain
[ ] Eyelid swelling due to active TED
[ ] Eyelid erythema
[ ] Conjunctival injection due to active TED
[ ] Chemosis
[ ] Inflammation of caruncle or plica

Total CAS score 0

Exam 09/29/24:

BCVA 20/20 OU
Color plates: 11/11 OU
Pupils: no rAPD

Imaging: None

Impression/Plan
No current TED
- disease is currently: [ ] Better ; [ ] Worse ; [ ] Same; [x] NA first evaluation
- there is not evidence of compressive optic neuropathy in the bilateral eye
- recommend observation at this time with PFAT PRN

Nahia Dib El Jalbout, MD
Oculoplastics Fellow

ATTENDING ATTESTATION

I personally evaluated the patient and agree with the resident or fellow's findings and plans as written except/in addition to as noted below. The final history, exam findings, image and laboratory interpretations and the plan documented in the record represent my own personal examination, judgement and conclusions. Plan discussed with patient in detail and all questions were answered.

Graves' disease consult. Pt denies diplopia or vision changes.

CAS 0

No evidence of optic neuropathy or corneal exposure with no TED symptoms present.
Recommend FU in 9 months or sooner with any changes - pain, redness, change in vision.

----------(data below generated by Natasha Michon Ruiz, NP)----------

***Patient Verification & Telemedicine Consent & Financial Waiver: ***
1. *Identity: I have verified this patient's identity to be accurate.*
2. *Consent: I verify consent has been secured in one of the following methods: (a) **obtained written/ online attestation consent** (via MyChartVideoVisit pathway), (b) **the spoke-side provider has obtained verbal or written consent **from patient/ surrogate (if this is a "provider to provider" evaluation), or (c) in all other cases, **I have personally obtained verbal consent** from the patient/ surrogate (noting all elements below) to perform this **voluntary** telemedicine evaluation (including obtaining history, performing examination and reviewing data provided by the patient). The patient/ surrogate has the **right to refuse** this evaluation. I have explained **risks** (including potential loss of confidentiality), **benefits**, **alternatives**, and the **potential need for subsequent face to face** care. Patient/ surrogate understands that there is a **risk **of medical inaccuracies given that our recommendations will be made based on reported data (and we must therefore assume this information is accurate). Knowing that there is a risk that this information is not reported accurately, and that the telemedicine video, audio, or data feed may be incomplete, the patient agrees to proceed with evaluation and holds us harmless knowing these risks.*
3. *Healthcare Team: The patient/ surrogate has been notified that **other healthcare professionals** (including students, residents and technical personnel) may be involved in this audio-video evaluation. All laws concerning **confidentiality and patient access** to medical records and copies of medical records apply to telemedicine.*
4. *Privacy: If this is a MyChart Video Visit, the patient/ surrogate has received the **UCSD Notice of Privacy Practices** via E-Checkin process. For all other video visit techniques, I have verbally provided the patient/ surrogate with the UCSD web link in English ([https://health.ucsd.edu/hipaa/Pages/hipaa.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa.aspx \t _blank)) or Spanish ([https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx \t _blank)). The patient/ surrogate acknowledges both being provided the NPP link, and has been offered to have the NPP mailed to the patient/ surrogate by US mail. The patient/ surrogate has voiced understanding an acknowledgement of receipt of this NPP web address. If the patient/surrogate has elected to receive the NPP via US mail, I verify that the NPP will be sent promptly to the patient/surrogate via US mail.*
5. *Capacity: I have reviewed this above verification and consent paragraph with the patient/ surrogate and the patient is **capacitated or has a surrogate**. If the patient is not capacitated to understand the above, and no surrogate is available, since this is not an emergency evaluation, the visit will be rescheduled until such time that the patient can consent, or the surrogate is available to consent. If this is an emergency evaluation and the patient is not capacitated to understand the above, and no surrogate is available, I am proceeding with this evaluation as this is felt to be an emergency setting and no appropriate specialist is available at the bedside to p
erform these evaluations.*
6. *Financial Waiver: If this is a MyChart Video Visit, the patient has been made aware of the **financial waiver** via E-Checkin process. For all other video visit techniques, an E-Checkin process is not performed. As such, I have personally verbally informed the patient/ surrogate that this evaluation will be a **billable encounter **similar to an in-person clinic visit, and the patient/ surrogate has agreed to pay the fee for services rendered. If we are billing insurance for the patient's telehealth visit, his out-of-pocket cost will be determined based on his plan and will be billed to him. The patient/ surrogate has also been informed that if the patient does not have insurance or does not wish to use insurance, UC San Diego Health's cash price for a primary care telehealth visit is $59.00 and specialist telehealth visit is $88.00. I have further informed the patient/ surrogate that in the event the patient has additional services provided in conjunction with the specialty visit (Ex. Psychotherapy services), those services will be billed at the current rate less a 45% discount.*
7. Intra-State Location: The patient/ surrogate attests to understanding that if the patient accesses these services from a location outside of California, that the patient does so at the patient's own risk and initiative and that the patient is ultimately responsible for compliance with any laws or regulations associated with the patient's use.
*8. Specific Use:The patient/ surrogate understands that UCSD makes no representation that materials or servicesdelivered via telecommunication services, or listed on telemedicine websites, are appropriate or available for use in any other location. *

Results - documented in this encounter

VARICELLA IGG ANTIBODY QUANTITATIVE - Final result (08/07/2024 8:15 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Varicella IgG Antibody Quantitative	2,087.0	See Comment INDEX		08/08/2024 10:57 AM PDT	CENTER ADV LAB MEDICINE	

Comment:

```
<135.0 Index = Negative
=>135.0 - <165.0 Index = Equivocal (A second sample should be collected).
=>165.0 Index = Positive
Presence of detectable VZV IgG antibodies. A positive result generally
indicates exposure to the pathogen or administration of specific
immune-globulins, but it is no indication of active infection or stage of
disease.
```

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time

MEASLES IGG ANTIBODY QUANTITATIVE - Final result (08/07/2024 8:15 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Measles IgG Antibody Quantitative	84.5	See Comment AU/mL		08/08/2024 10:56 AM PDT	CENTER ADV LAB MEDICINE	

Comment:

```
<13.5 AU/mL = Negative
=>13.5 - <16.5 AU/mL = Equivocal (A second sample should be collected no
less than one or two weeks later).
=>16.5 AU/mL = Positive
Presence of detectable measles virus IgG antibodies. A positive result
generally indicates past exposure to measles virus or previous vaccination.
```

RUBELLA IGG ANTIBODY, BLOOD - Final result (08/07/2024 8:15 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Rubella IGG Ab	POSITIVE	See Comment		08/08/2024 10:56 AM PDT	CENTER ADV LAB MEDICINE	

Comment:
```
A positive result indicates previous
vaccination or history of exposure. This
test cannot differentiate acute illness
from previous exposure.
This test uses an FDA-approved indirect
chemiluminescence assay (CLIA) for the
qualitative detection of IgG antibodies
specific to rubella virus.
```

Results - documented in this encounter

MUMPS IGG ANTIBODY QUANTITATIVE - Final result (07/18/2024 1:25 PM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Mumps IgG Antibody Quantitative	52.6	See Comment AU/mL		07/22/2024 12:51 PM PDT	CENTER ADV LAB MEDICINE	

Comment:

```
<9.0 AU/mL = Negative
=> 9.0 - <11.0 AU/mL = Equivocal (A second sample should be collected no
less than one or two weeks later).
=>11.0 AU/mL = Positive
Presence of detectable mumps virus IgG antibodies. A positive result
generally indicates past exposure to mumps virus or previous vaccination.
```

ENDOCRINE NEW CONSULT

Reason for consult: No chief complaint on file.

Referring Physician: Torres, Josefina

ASSESSMENT/RECOMMENDATIONS:

Assessment ** **
Joel Paul Polizzi is a 38 year old male who presents for evaluation of new Graves disease.

Graves disease
Recent diagnosis started on methimazole. Was taken off for about a month due to hypothyroid labs and has come back on the medication a week ago. Symptoms improving. Discussed prognosis of disease and treatment options including definitive treatment with surgery. Discussed also that 1/3 of patients achieve remission with MMI within 1-2 years. Given he was started on MMI fairly recently in February, will plan to continue for now.

Plan ** **
- Decrease methimazole to 7.5 mg daily- labs August 8th or so
- Switch propranolol to 10 mg TID
- Referral to eye clinic
- Repeat labs in 1 month: CBC, TSH, free T4, total T3

- RTC in 4 months

Joel was seen today for thyroid problem.

Diagnoses and all orders for this visit:

Graves disease
- methIMAzole (TAPAZOLE) 5 MG tablet; Take 1.5 tablets (7.5 mg) by mouth daily.
- TSH, Blood - See Instructions; Future
- Free Thyroxine, Blood Green Plasma Separator Tube; Future
- Total T3, Blood Green Plasma Separator Tube; Future
- propranolol (INDERAL) 10 MG tablet; Take 1 tablet (10 mg) by mouth 3 times daily as needed (IF HR resting is over 90 beats per min).
- endo f2f fu 4 months; Future
- TED clinic
- Liver Panel, Blood Green Plasma Separator Tube; Future
- CBC w/ Diff Lavender; Future

**HPI: **Joel Paul Polizzi is a 38 year old male with graves' disease

Diagnosis made aroun dfeb 2024 by PCP
Started methimazole 2/5/24 and propanolol 60 ER prn for tremors
Repeat testing show improvement of TFT

Briefly off of methimazole may 2024- June 26 2024 due to hypothyrodism on labs and weight gain 5-10 labs

Reports the first time he went on MMI his tremors and palpitations improved quickly. When he went off the MMI had return of tremors and palpitations about 2 weeks later, hair loss, and also saw an increase of 10 lbs. His symptoms have mildly improved since going back on it about a week ago.

Family history
Mom with hypothyroid
Paternal aunt with hyperthyroid

Symptoms :
Fatigue: No
Shortness of breath: Mild, a/b palpitations and mild anxiety
Hyper defecation: No
Tremor: No
Palpitations: Mild heart rate: 82
Leg swelling: No
Shortness of breath /cp: No chest pain
Smoking: Former smoker, quit 2 years ago (was smoking ~15 years, half pack a day)
Hair loss: Yes
Weight loss : 5 lbs
Neck pain/tender thyroid: No
Diplopia : No (history of chronic ocular migraines - gets circles around vision)
Dry eyes/injected eyes: No
Fever: No
Insomnia: Yes, sleep onset insomnia
Muscle weakness: No

Recent illnesses: No
Seizure meds: No

**Meds: **
Supplements: No Biotin: No
OCP: N/a
Kelp/iodine: No

I personally reviewed records (including other external provider notes/labs/imaging reports and any available uploaded images on impax) in careeverywhere/from other providers.
CURES reviewed N/a

Social barriers if any: No. Lives with wife.

Independent historian with the patient: Patient only

ROS:
ROS negative except for what is noted above in HPI

Follow up Results (Labs done 6/26/24)

[table#2]:
Subjective:
Joel Paul Polizzi is a pleasant 38 year old male who is calling form home for follow up.

Visit completed virtually.

Graves disease
Evaluated on 1/29 for tremors on BL hands progressing over the last 3 years.
Had palpitations intermittently - Few times per week - episodes lasted for < 1 min and resolved
Sometimes felt lymph nodes enlarged on his neck.
Paternal Aunt: h/o hyperthyroidism
Mother: hypothyroidsm.
Patient had elevated T4 and low TSH consistent with hyperthyroidism.
TSI/T3 testing was Consistent with Graves disease.
Started taking Methimazole 10 mg daily on 2/5/24 and propanolol 60 ER prn for tremors.
Had repeat testing showing improvement of T3 and T4 levels showing good response to therapy.

Since last appointment patient stop taking Methimazole due to hypothyroidism symptoms and labs.
During last visit Patient reported weight gain 5-10 LB, muscle cramps over shoulders, legs, and abdomen, generalized muscle tightness alleviated by stretching

He repeated labs showing low levels of TSH <0.01 and elevated T3; free T4 consistent with Hyperthyroidism
Active symptoms: Bilateral hand tremors, Anxiety, palpitations, hair loss, stress, gradually progressing since 2 weeks ago
Lost 5 pounds. No insomnia. Denies constipation.
Took propanolol once for alleviation of tremors.

[table#7]:
ROS
Review of Systems. Pertinent positives per HPI, otherwise noncontributory

[table#8]:
Assessment and Plan:

Plan:
1. Graves disease
2. Tremor of both hands
- Uncontrolled
- Repeated labs showing low levels of TSH <0.01 and elevated T3; free T4 consistent with Hyperthyroidism
- Active symptoms: Bilateral hand tremors, Anxiety, palpitations, hair loss, stress, gradually progressing since 2 weeks ago. Lost 5 pounds.
- No insomnia. Denies constipation. Took propanolol once for alleviation of tremors.
- Results were discussed with patient
- Elevated TSI consistent with Graves disease
- Recommended to start taking methimazole as prescribed, patient might need to take methimazole indefinitely.
- Recommend propanolol as needed for anxiety/tremors/palpitations
- Continue to monitor thyroid function, repeat test in 4-6 weeks
- Recommend evaluation by Endocrinology to discuss prognosis and different alternatives for treatment including radioactive iodine versus surgery
- TSH, Blood - See Instructions; Future
- To
tal T3, Blood Green Plasma Separator Tube; Future
- Free Thyroxine, Blood Green Plasma Separator Tube; Future
- CONSULT/REFERRAL TO ENDOCRINOLOGY
- methIMAzole (TAPAZOLE) 10 MG tablet; Take 1 tablet (10 mg) by mouth daily. Dispense: 30 tablet; Refill: 0

8/16/2024	1:40 PM	Torres, Josefina, MD	BKH PC	BANKER'S HIL

All of the patients questions were answered and patient verbalized understanding and agreement of the above plan. Pertinent past medical history, surgical history, family history, and social history were reviewed. I have reviewed pertinent recent medical encounters, lab data, imaging data, and procedures.

It was a pleasure to see Joel Polizzi today. Patient is to contact me if there are any further questions or concerns. This can be done either by contacting the clinic or through MyChart.

Josefina Torres, MD
Family Medicine
UCSD Health

----------(data below generated by Josefina Torres, MD)----------

***Patient Verification & Telemedicine Consent & Financial Waiver: ***
1. *Identity: I have verified this patient's identity to be accurate.*
2. *Consent: I verify consent has been secured in one of the following methods: (a) **obtained written/ online attestation consent** (via MyChartVideoVi
sit pathway), (b) **the spoke-side provider has obtained verbal or written consent **from patient/surrogate (if this is a "provider to provider" evaluation), or (c) in all other cases, **I have personally obtained verbal consent** from the patient/ surrogate (noting all elements below) to perform this **voluntary** telemedicine evaluation (including obtaining history, performing examination and reviewing data provided by the patient). The patient/ surrogate has the **right to refuse** this evaluation. I have explained **risks** (including potential loss of confidentiality), **benefits**, **alternatives**, and the **potential need for subsequent face to face** care. Patient/ surrogate understands that there is a **risk **of medical inaccuracies given that our recommendations will be made based on reported data (and we must therefore assume this information is accurate). Knowing that there is a risk that this information is not reported accurately, and that the telemedicine video, audio, or data feed may be incomplete, the patient agrees to proceed with evaluation and holds us harmless knowing these risks.*
3. *Healthcare Team: The patient/ surrogate has been notified that **other healthcare professionals** (including students, residents and technical personnel) may be involved in this audio-video evaluation. All laws concerning **confidentiality and patient access** to medical records and copies of medical records apply to telemedicine.*
4. *Privacy: If this is a MyChart Video Visit, the patient/ surrogate has received the **UCSD Notice of Privacy Practices** via E-Checkin process. For all other video visit techniques, I have verbally provided the patient/ surrogate with the UCSD web link in English ([https://health.ucsd.edu/hipaa/Pages/hipaa.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa.aspx \t _blank)) or Spanish ([https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx \t _blank)). The patient/ surrogate acknowledges both being provided the NPP link, and has been offered to have the NPP mailed to the patient/ surrogate by US mail. The patient/ surrogate has voiced understanding an acknowledgement of receipt of this NPP web address. If the patient/surrogate has elected to receive the NPP via US mail, I verify that the NPP will be sent promptly to the patient/surrogate via US mail.*
5. *Capacity: I have reviewed this above verification and consent paragraph with the patient/ surrogate and the patient is **capacitated or has a surrogate**. If the patient is not capacitated to understand the above, and no surrogate is available, since this is not an emergency evaluation, the visit will be rescheduled until such time that the patient can consent, or the surrogate is available to consent. If this is an emergency evaluation and the patient is not capacitated to understand the above, and no surrogate is available, I am proceeding with this evaluation as this is felt to be an emergency setting and no appropriate specialist is available at the bedside to perform these evaluations.*
6. *Financial Waiver: If this is a MyChart Video Visit, the patient has been made aware of the **financial waiver** via E-Checkin process. For all other video visit techniques, an E-Checkin process is not performed. As such, I have personally verbally informed the patient/ surrogate that this evaluation will be a **billable encounter **similar to an in-person clinic visit, and the patient/ surrogate has agreed to pay the fee for services rendered. If we are billing insurance for the patient's telehealth visit, his out-of-pocket cost will be determined based on his plan and will be billed to him. The patient/ surrogate has also been informed that if the patient does not have insurance or does not wish to use insurance, UC San Diego Health's cash price for a primary care telehealth visit is $59.00 and specialist telehealth visit is $88.00. I have further
informed the patient/ surrogate that in the event the patient has additional services provided in conjunction with the specialty visit (Ex. Psychotherapy services), those services will be billed at the current rate less a 45% discount.*
7. Intra-State Location: The patient/ surrogate attests to understanding that if the patient accesses these services from a location outside of California, that the patient does so at the patient's own risk and initiative and that the patient is ultimately responsible for compliance with any laws or regulations associated with the patient's use.
*8. Specific Use:The patient/ surrogate understands that UCSD makes no representation that materials or servicesdelivered via telecommunication services, or listed on telemedicine websites, are appropriate or available for use in any other location. *

Family Medicine - Video Visit

[table#1]:
CC:
Follow up Results (Labs done: 5/20/24) and Follow Up (Hand tremors)

[table#2]:
Subjective:
Joel Paul Polizzi is a pleasant 37 year old male who is calling form home for follow up.

Visit completed virtually.

Graves disease
Evaluated on 1/29 for tremors on BL hands progressing over the last 3 years.
Had palpitations intermittently - Few times per week - episodes lasted for < 1 min and resolved
Sometimes felt lymph nodes enlarged on his neck.
Paternal Aunt: h/o hyperthyroidism
Mother: hypothyroidsm.
Patient had elevated T4 and low TSH consistent with hyperthyroidism.
TSI/T3 testing was Consistent with Graves disease.
Started taking Methimazole 10 mg daily on 2/5/24 and propanolol 60 ER prn for tremors.
Had repeat testing showing improvement of T3 and T4 levels showing good response to therapy.

Since last appointment patient repeated labs showing NORMAL levels of TSH and T3; free T4 is now low.
He continued taking Methimazole 10 mg daily consistently.
Patient gained 5-10 LB in the last 2-3 months
Patient getting muscle cramps over shoulders, legs, and abdomen, concerned about his potassium levels.
Patient has generalized muscle tightness alleviated by stretching
No insomnia. No tremors. Denies constipation.
[table#3]:
	Latest Reference Range & Units	01/29/24 11:02	03/21/24 08:16	05/20/24 08:21

[table#8]:
ROS
Review of Systems. Pertinent positives per HPI, otherwise noncontributory

[table#9]:
Assessment and Plan:

Plan:
1. Graves disease
- Controlled
- NORMAL levels of TSH and T3;
- Free T4 is now low secondary to medication. Results were discussed with patient
- Elevated TSI consistent with Graves disease
- Current symptoms: cramps, muscle tightness, weight gain
Paternal Aunt: h/o hyperthyroidism
Mother: hypothyroidsm.
Recommended to stop taking methimazole
Continue to monitor thyroid function, repeat test in 4-6 weeks
F/u in 12 weeks or sooner if symptoms fail to improve
[table#10]:
| Component
Ref Range & Units	6 d ago

| Thyroid Stimulating Immunoglobulin-TSI-ARUP
<=0.54 [IU]/L | 11.10 High |
- TSH, Blood - See Instructions; Future
- Total T3, Blood Green Plasma Separator Tube; Future
- Free Thyroxine, Blood Green Plasma Separator Tube; Future

5/28/2024	5:00 PM	Torres, Josefina, MD	BKH PC	BANKER'S HIL

All of the patients questions were answered and patient verbalized understanding and agreement of the above plan. Pertinent past medical history, surgical history, family history, and social history were reviewed. I have reviewed pertinent recent medical encounters, lab data, imaging data, and procedures.

It was a pleasure to see Joel Polizzi today. Patient is to contact me if there are any further questions or concerns. This can be done either by contacting the clinic or through MyChart.

Josefina Torres, MD
Family Medicine
UCSD Health

----------(data below generated by Josefina Torres, MD)----------

***Patient Verification & Telemedicine Consent & Financial Waiver: ***
1. *Identity: I have verified this patient's identity to be accurate.*
2. *Consent: I verify consent has been secured in one of the following methods: (a) **obtained written/ online attestation consent** (via MyChartVideoVisit pathway), (b) **the spoke-side provider has obtained verbal or written consent **from patient/ surrogate (if this is a "provider to provider" evaluation), or (c) in all other cases, **I have personally obtained verbal consent** from the patient/ surrogate (noting all elements below) to perform this **voluntary** telemedicine evaluation (including obtaining history, performing examination and reviewing data provided by the patient). The patient/ surrogate has the **right to refuse** this evaluation. I have explained **risks** (including potential loss of confidentiality), **benefits**, **alternatives**, and the **potential need for subsequent face to face** care. Patient/ surrogate understands that there is a **risk **of medical inaccuracies given that our recommendations will be made based on reported data (and we must therefore assume this information is accurate). Knowing that there is a risk that this information is not reported accurately, and that the telemedicine video, audio, or data feed may be incomplete, the patient agrees to proceed with evaluation and holds us harmless knowing these risks.*
3. *Healthcare Team: The patient/ surrogate has been notified that **other healthcare professionals** (including students, residents and technical personnel) may be involved in this audio-video evaluation. All laws concerning **confidentiality and patient access** to medical records and copies of medical records apply to telemedicine.*
4. *Privacy: If this is a MyChart Video Visit, the patient/ surrogate has received the **UCSD Notice of Privacy Practices** via E-Checkin process. For all other video visit techniques, I have verbally provided the patient/ surrogate with the UCSD web link in English ([https://health.ucsd.edu/hipaa/Pages/hipaa.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa.aspx \t _blank)) or Spanish ([https:/
/health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx \t _blank)). The patient/ surrogate acknowledges both being provided the NPP link, and has been offered to have the NPP mailed to the patient/ surrogate by US mail. The patient/ surrogate has voiced understanding an acknowledgement of receipt of this NPP web address. If the patient/ surrogate has elected to receive the NPP via US mail, I verify that the NPP will be sent promptly to the patient/surrogate via US mail.*
5. *Capacity: I have reviewed this above verification and consent paragraph with the patient/ surrogate and the patient is **capacitated or has a surrogate**. If the patient is not capacitated to understand the above, and no surrogate is available, since this is not an emergency evaluation, the visit will be rescheduled until such time that the patient can consent, or the surrogate is available to consent. If this is an emergency evaluation and the patient is not capacitated to understand the above, and no surrogate is available, I am proceeding with this evaluation as this is felt to be an emergency setting and no appropriate specialist is available at the bedside to perform these evaluations.*
6. *Financial Waiver: If this is a MyChart Video Visit, the patient has been made aware of the **financial waiver** via E-Checkin process. For all other video visit techniques, an E-Checkin process is not performed. As such, I have personally verbally informed the patient/ surrogate that this evaluation will be a **billable encounter **similar to an in-person clinic visit, and the patient/ surrogate has agreed to pay the fee for services rendered. If we are billing insurance for the patient's telehealth visit, his out-of-pocket cost will be determined based on his plan and will be billed to him. The patient/ surrogate has also been informed that if the patient does not have insurance or does not wish to use insurance, UC San Diego Health's cash price for a primary care telehealth visit is $59.00 and specialist telehealth visit is $88.00. I have further informed the patient/ surrogate that in the event the patient has additional services provided in conjunction with the specialty visit (Ex. Psychotherapy services), those services will be billed at the current rate less a 45% discount.*
7. Intra-State Location: The patient/ surrogate attests to understanding that if the patient accesses these services from a location outside of California, that the patient does so at the patient's own risk and initiative and that the patient is ultimately responsible for compliance with any laws or regulations associated with the patient's use.
*8. Specific Use:The patient/ surrogate understands that UCSD makes no representation that materials or servicesdelivered via telecommunication services, or listed on telemedicine websites, are appropriate or available for use in any other location. *

Family Medicine - Video Visit

[table#1]:
CC:
Follow Up (Labs; grave's disease)

[table#2]:
Subjective:
Joel Paul Polizzi is a pleasant 37 year old male who is calling form home for follow up.

Visit completed virtually.

Evaluated on 1/29 for tremors on BL hands progressing over the last 3 years.
Had palpitations intermittently - Few times per week - episodes lasted for < 1 min and resolved
Sometimes felt lymph nodes enlarged on his neck.
Paternal Aunt: h/o hyperthyroidism
Mother: hypothyroidsm.
Patient had elevated T4 and low TSH consistent with hyperthyroidism.
TSI/T3 testing was Consistent with Graves disease.
Patient has been taking Methimazole 10 mg daily since 2/5/24 and propanolol 60 ER prn for tremors.
Patient reports he has been feeling well. Has intermittent episodes of tremors and dizziness otherwise has been tolerating medication well.
Recently travelled to Hawaii, had skin rash causing allergic reaction but was secondary to food.
Since last appointment patient had repeat testing showing improvement of T3 and T4 levels showing good response to therapy.

1.	**Graves disease **	**E05.00**	**242.00**	**TSH, Blood - See Instructions**
				Total T3, Blood Green Plasma Separator Tube
				Free Thyroxine, Blood Green Plasma Separator Tube

Plan:
1. Graves disease
- Active, improving
- Elevated T4 and low TSH consistent with hyperthyroidism.
- Elevated TSI consistent with Graves disease
- Current symptoms: intermittent tremors, dizziness and palpitations occasionally
Paternal Aunt: h/o hyperthyroidism
Mother: hypothyroidsm.
Continue Propanolol for hand tremors however recommend to decrease dose and take half tablet to prevent dizziness since symptoms are getting better and less frequent
Continue methimazole as prescribed
Continue to monitor thyroid function
Etiology, medication side effects were discussed
F/u in 8 weeks

| **Future Appointments** |

| --- |
| **Date** | **Time** | **Provider** | **Department** | **Center** |
| 5/28/2024 | 5:00 PM | Torres, Josefina, MD | BKH PC | BANKER'S HIL |

I personally spent 30 total minutes in face-to-face and non-face-to-face activities related to the patient's visit today, excluding any separately reportable services/procedures.
All of the patients questions were answered and patient verbalized understanding and agreement of the above plan. Pertinent past medical history, surgical history, family history, and social history were reviewed. I have reviewed pertinent recent medical encounters, lab data, imaging data, and procedures.

It was a pleasure to see Joel Polizzi today. Patient is to contact me if there are any further questions or concerns. This can be done either by contacting the clinic or through MyChart.

Josefina Torres, MD

UCSD Health

----------(data below generated by Josefina Torres, MD)----------

***Patient Verification & Telemedicine Consent & Financial Waiver: ***
1. *Identity: I have verified this patient's identity to be accurate.*
2. *Consent: I verify consent has been secured in one of the following methods: (a) **obtained written/ online attestation consent** (via MyChartVideoVisit pathway), (b) **the spoke-side provider has obtained verbal or written consent **from patient/ surrogate (if this is a "provider to provider" evaluation), or (c) in all other cases, **I have personally obtained verbal consent** from the patient/ surrogate (noting all elements below) to perform this **voluntary** telemedicine evaluation (including obtaining history, performing examination and reviewing data provided by the patient). Th
e patient/ surrogate has the **right to refuse** this evaluation. I have explained **risks** (including potential loss of confidentiality), **benefits**, **alternatives**, and the **potential need for subsequent face to face** care. Patient/ surrogate understands that there is a **risk **of medical inaccuracies given that our recommendations will be made based on reported data (and we must therefore assume this information is accurate). Knowing that there is a risk that this information is not reported accurately, and that the telemedicine video, audio, or data feed may be incomplete, the patient agrees to proceed with evaluation and holds us harmless knowing these risks.*
3. *Healthcare Team: The patient/ surrogate has been notified that **other healthcare professionals** (including students, residents and technical personnel) may be involved in this audio-video evaluation. All laws concerning **confidentiality and patient access** to medical records and copies of medical records apply to telemedicine.*
4. *Privacy: If this is a MyChart Video Visit, the patient/ surrogate has received the **UCSD Notice of Privacy Practices** via E-Checkin process. For all other video visit techniques, I have verbally provided the patient/ surrogate with the UCSD web link in English ([https://health.ucsd.edu/hipaa/Pages/hipaa.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa.aspx \t _blank)) or Spanish ([https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx \t _blank)). The patient/ surrogate acknowledges both being provided the NPP link, and has been offered to have the NPP mailed to the patient/ surrogate by US mail. The patient/ surrogate has voiced understanding an acknowledgement of receipt of this NPP web address. If the patient/surrogate has elected to receive the NPP via US mail, I verify that the NPP will be sent promptly to the patient/surrogate via US mail.*
5. *Capacity: I have reviewed this above verification and consent paragraph with the patient/ surrogate and the patient is **capacitated or has a surrogate**. If the patient is not capacitated to understand the above, and no surrogate is available, since this is not an emergency evaluation, the visit will be rescheduled until such time that the patient can consent, or the surrogate is available to consent. If this is an emergency evaluation and the patient is not capacitated to understand the above, and no surrogate is available, I am proceeding with this evaluation as this is felt to be an emergency setting and no appropriate specialist is available at the bedside to perform these evaluations.*
6. *Financial Waiver: If this is a MyChart Video Visit, the patient has been made aware of the **financial waiver** via E-Checkin process. For all other video visit techniques, an E-Checkin process is not performed. As such, I have personally verbally informed the patient/ surrogate that this evaluation will be a **billable encounter **similar to an in-person clinic visit, and the patient/ surrogate has agreed to pay the fee for services rendered. If we are billing insurance for the patient's telehealth visit, his out-of-pocket cost will be determined based on his plan and will be billed to him. The patient/ surrogate has also been informed that if the patient does not have insurance or does not wish to use insurance, UC San Diego Health's cash price for a primary care telehealth visit is $59.00 and specialist telehealth visit is $88.00. I have further informed the patient/ surrogate that in the event the patient has additional services provided in conjunction with the specialty visit (Ex. Psychotherapy services), those services will be billed at the current rate less a 45% discount.*
*7. Intra-State Location: The patient/ surrogate attests to understanding that if the patient accesses these services from a location outside of California, that the patient does so at the patient's own risk and
initiative and that the patient is ultimately responsible for compliance with any laws or regulations associated with the patient's use.*
*8. Specific Use:The patient/ surrogate understands that UCSD makes no representation that materials or servicesdelivered via telecommunication services, or listed on telemedicine websites, are appropriate or available for use in any other location. *

[table#1]:
CC:
Follow up Results (Labs drawn 2/1/24)

[table#2]:
Subjective:
Joel Paul Polizzi is a pleasant 37 year old male who is calling form home for abnormal labs.

Visit completed virtually.

Patient had elevated T4 and low TSH consistent with hyperthyroidism.
Evaluated on 1/29 for tremors on BL hands progressing over the last 3 years.
Had palpitations intermittently - Few times weeks - episodes last for < 1 min and resolves
Sometimes feels lymph nodes enlarged on his neck.
Paternal Aunt: h/o hyperthyroidism

Mother: hypothyroidsm.
Since last appointment patient had TSI/T3 testing, Consistent with Graves disease.
[table#3]:

Assessment and Plan:

[table#8]:
		ICD-10-CM	ICD-9-CM	
1.	**Graves disease **	**E05.00**	**242.00**	**methIMAzole (TAPAZOLE) 10 MG tablet**
				TSH, Blood - See Instructions
				Free Thyroxine, Blood Green Plasma Separator Tube

Plan:
1. Graves disease
- New diagnosis
- Elevated T4 and low TSH consistent with hyperthyroidism.
- Elevated TSI consistent with Graves disease
- Current symptoms: Evaluated on 1/29 for tremors on BL hands progressing over the last 3 years.
- Had palpitations intermittently - Few times weeks - episodes last for < 1 min and resolves
- Sometimes feels lymph nodes enlarged on his neck.
Paternal Aunt: h/o hyperthyroidism
Mother: hypothyroidsm.
Propanolol prescribed during last appt for hand tremmors
Start methimazole as prescribed
Monitor thyroid function to assess response to therapy
Etiology, medication side effects discussed in detail with patient
F/u in 6-8 weeks
[table#9]:
	Latest Reference Range & Units	01/29/24 11:02
Thyroxine (T4)	4.5 - 10.9 ug/dL	**15.9 (H)**

Followup:
Return in about 6 weeks (around 3/18/2024).

All of the patients questions were answered and patient verbalized understanding and agreement of the above plan. Pertinent past medical history, surgical history, family history, and social history were reviewed. I have reviewed pertinent recent medical encounters, lab data, imaging data, and procedures.

It was a pleasure to see Joel Polizzi today. Patient is to contact me if there are any further questions or concerns. This can be done either by contacting the clinic or through MyChart.

Josefina Torres, MD
Family Medicine
UCSD Health

----------(data below generated by Josefina Torres, MD)----------

***Patient Verification & Telemedicine Consent & Financial Waiver: ***
1. *Identity: I have verified this patient's identity to be accurate.*
2. *Consent: I verify consent has been secured in one of the following methods: (a) **obtained written/ online attestation consent** (via MyChartVideoVisit pathway), (b) **the spoke-side provider has obtained verbal or written consent **from patient/ surrogate (if this is a "provider to provider" evaluation), or (c) in all other cases, **I have personally obtained verbal consent** from the patient/ surrogate (noting all elements below) to perform this **voluntary** telemedicine evaluation (including obtaining history, performing examination and reviewing data provided by the patient). The patient/ surrogate has the **right to refuse** this evaluation. I have explained **risks** (including potential loss of confidentiality), **benefits**, **alternatives**, and the **potential need for subsequent face to face** care. Patient/ surrogate understands that there is a **risk **of medical inaccuracies given that our recommendations will be made based on reported data (and we must therefore assume this information is accurate). Knowing that there is a risk that this information is not reported accurately, and that the telemedicine video, audio, or data feed may be incomplete, the patient agrees to proceed with evaluation and holds us harmless knowing these risks.*
3. *Healthcare Team: The patient/ surrogate has been notified that **other healthcare professionals** (including students, residents and technical personnel) may be involved in this audio-video evaluation. All laws concerning **confidentiality and patient access** to medical records and copies of medical records apply to telemedicine.*
4. *Privacy: If this is a MyChart Video Visit, the patient/ surrogate has received the **UCSD Notice of Privacy Practices** via E-Checkin process. For all other video visit techniques, I have verbally provided the patient/ surrogate with the UCSD web link in English ([https://health.ucsd.edu/hipaa/Pages/hipaa.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa.aspx \t _blank)) or Spanish ([https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx \t _blank)). The patient/ surrogate acknowledges both being provided the NPP link, and has been offered to have the NPP mailed to the patient/ surrogate by US mail. The patient/ surrogate has voiced understanding an acknowledgement of receipt of this NPP web address. If the patient/surrogate has elected to receive the NPP via US mail, I verify that the NPP will be sent promptly to the patient/surrogate via US mail.*
5. *Capacity: I have reviewed this above verification and consent pa
ragraph with the patient/ surrogate and the patient is **capacitated or has a surrogate**. If the patient is not capacitated to understand the above, and no surrogate is available, since this is not an emergency evaluation, the visit will be rescheduled until such time that the patient can consent, or the surrogate is available to consent. If this is an emergency evaluation and the patient is not capacitated to understand the above, and no surrogate is available, I am proceeding with this evaluation as this is felt to be an emergency setting and no appropriate specialist is available at the bedside to perform these evaluations.*
6. *Financial Waiver: If this is a MyChart Video Visit, the patient has been made aware of the **financial waiver** via E-Checkin process. For all other video visit techniques, an E-Checkin process is not performed. As such, I have personally verbally informed the patient/ surrogate that this evaluation will be a **billable encounter **similar to an in-person clinic visit, and the patient/ surrogate has agreed to pay the fee for services rendered. If we are billing insurance for the patient's telehealth visit, his out-of-pocket cost will be determined based on his plan and will be billed to him. The patient/ surrogate has also been informed that if the patient does not have insurance or does not wish to use insurance, UC San Diego Health's cash price for a primary care telehealth visit is $59.00 and specialist telehealth visit is $88.00. I have further informed the patient/ surrogate that in the event the patient has additional services provided in conjunction with the specialty visit (Ex. Psychotherapy services), those services will be billed at the current rate less a 45% discount.*
7. Intra-State Location: The patient/ surrogate attests to understanding that if the patient accesses these services from a location outside of California, that the patient does so at the patient's own risk and initiative and that the patient is ultimately responsible for compliance with any laws or regulations associated with the patient's use.
*8. Specific Use:The patient/ surrogate understands that UCSD makes no representation that materials or servicesdelivered via telecommunication services, or listed on telemedicine websites, are appropriate or available for use in any other location. *

CC:
Follow up Results (Labs done 1/29/24)

[table#2]:
Subjective:
Joel Paul Polizzi is a pleasant 37 year old male who is calling from home for:

Follow up on abnormal labs.
Patient had elevated T4 and low TSH consistent with hyperthyroidism.
Evaluated on 1/29 for tremors on BL hands progressing over the last 3 years.
Had palpitations intermittently - Few times weeks - episodes last for < 1 min and resolves
Sometimes feels lymph nodes enlarged on his neck.
Paternal Aunt: h/o hyperthyroidism
Mother: hypothyroidsm.

Pressure sensation on lower pelvis, tenesmus, every 30 min feels he needs to pee.
Since the past week, flank pressure. No fever associated. No blood in urine, mostly clear.

Mood:

Assessment and Plan:

[table#6]:
		ICD-10-CM	ICD-9-CM	
1.	**Hyperthyroidism **	**E05.90**	**242.90**	**Total T3, Blood Green Plasma Separator Tube**
				Thyroid Stimulating Immunoglobulin (TSI) SST
2.	UTI symptoms	R39.9	788.99	Urinalysis with Culture Reflex, when indicated

Plan:
1. Hyperthyroidism
- New diagnosis
- Elevated T4 and low TSH consistent with hyperthyroidism.
[table#7]:
	Latest Reference Range & Units	01/29/24 11:02
Thyroxine (T4)	4.5 - 10.9 ug/dL	**15.9 (H)**
TSH	0.27 - 4.20 uIU/mL	**<0.01 (L)**
- Current symptoms: Evaluated on 1/29 for tremors on BL hands progressing over the last 3 years.
- Had palpitations intermittently - Few times weeks - episodes last for < 1 min and resolves
- Sometimes feels lymph nodes enlarged on his neck.
Paternal Aunt: h/o hyperthyroidism
Mother: hypothyroidsm.
Different etiologies discussed in detail, check TSI for eval. Of Graves disease
Propanolol prescribed during last appt for hand tremmors
F/u labs
- Total T3, Blood Green Plasma Separator Tube; Future
- Thyroid Stimulating Immunoglobulin (TSI) SST; Future

2. UTI symptoms
Pressure sensation on lower pelvis, tenesmus, every 30 min feels he needs to pee.
Since the past week, flank pressure. No fever associated. No blood in urine, mostly clear.
Obtain UA to eval for UTI and treat accordingly
- Urinalysis with Culture Reflex, when indicated; Future

No follow-ups on file.

All of the patients questions were answered and patient verbalized understanding and agreement of the above plan. Pertinent past medical history, surgical history, family history, and social history were reviewed. I have reviewed pertinent recent medical encounters, lab data, imaging data, and procedures.

It was a pleasure to see Paul Polizzi today. Patient is to contact me if there are any further questions or concerns. This can be done either by contacting the clinic or through MyChart.

Josefina Torres, MD
Family Medicine
UCSD Health

----------(data below generated by Josefina Torres, MD)----------

***Patient Verification & Telemedicine Consent & Financial Waiver: ***
1. *Identity: I have verified this patient's identity to be accurate.*
2. *Consent: I verify consent has been secured in one of the following methods: (a) **obtained written/ online attestation consent** (via MyChartVideoVisit pathway), (b) **the spoke-side provider has obtained verbal or written consent **from patient/ surrogate (if this is a "provider to provider" evaluation), or (c) in all other cases, **I have personally obtained verbal consent** from the patient/ surrogate (noting all elements below) to perform this **voluntary** telemedicine evaluation (including obtaining history, performing examination and reviewing data provided by the patient). The patient/ surrogate has the **right to refuse** this evaluation. I have explained **risks** (including potential loss of confidentiality), **benefits**, **alternatives**, and the **potential need for subsequent face to face** care. Patient/ surrogate understands that there is a **risk **of medical inaccuracies given that our recommendations will be made based on reported data (and we must therefore assume this information is accurate). Knowing that there is a risk that this information is not reported accurately, and that the telemedicine video, audio, or data feed may be incomplete, the patient agrees to proceed with evaluation and holds us harmless

knowing these risks.*
3. *Healthcare Team: The patient/ surrogate has been notified that **other healthcare professionals** (including students, residents and technical personnel) may be involved in this audio-video evaluation. All laws concerning **confidentiality and patient access** to medical records and copies of medical records apply to telemedicine.*
4. *Privacy: If this is a MyChart Video Visit, the patient/ surrogate has received the **UCSD Notice of Privacy Practices** via E-Checkin process. For all other video visit techniques, I have verbally provided the patient/ surrogate with the UCSD web link in English ([https://health.ucsd.edu/hipaa/Pages/hipaa.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa.aspx \t _blank)) or Spanish ([https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx](https://health.ucsd.edu/hipaa/Pages/hipaa_sp.aspx \t _blank)). The patient/ surrogate acknowledges both being provided the NPP link, and has been offered to have the NPP mailed to the patient/ surrogate by US mail. The patient/ surrogate has voiced understanding an acknowledgement of receipt of this NPP web address. If the patient/surrogate has elected to receive the NPP via US mail, I verify that the NPP will be sent promptly to the patient/surrogate via US mail.*
5. *Capacity: I have reviewed this above verification and consent paragraph with the patient/ surrogate and the patient is **capacitated or has a surrogate**. If the patient is not capacitated to understand the above, and no surrogate is available, since this is not an emergency evaluation, the visit will be rescheduled until such time that the patient can consent, or the surrogate is available to consent. If this is an emergency evaluation and the patient is not capacitated to understand the above, and no surrogate is available,
I am proceeding with this evaluation as this is felt to be an emergency setting and no appropriate specialist is available at the bedside to perform these evaluations.*
6. *Financial Waiver: If this is a MyChart Video Visit, the patient has been made aware of the **financial waiver** via E-Checkin process. For all other video visit techniques, an E-Checkin process is not performed. As such, I have personally verbally informed the patient/ surrogate that this evaluation will be a **billable encounter **similar to an in-person clinic visit, and the patient/ surrogate has agreed to pay the fee for services rendered. If we are billing insurance for the patient's telehealth visit, his out-of-pocket cost will be determined based on his plan and will be billed to him. The patient/ surrogate has also been informed that if the patient does not have insurance or does not wish to use insurance, UC San Diego Health's cash price for a primary care telehealth visit is $59.00 and specialist telehealth visit is $88.00. I have further informed the patient/ surrogate that in the event the patient has additional services provided in conjunction with the specialty visit (Ex. Psychotherapy services), those services will be billed at the current rate less a 45% discount.*
7. Intra-State Location: The patient/ surrogate attests to understanding that if the patient accesses these services from a location outside of California, that the patient does so at the patient's own risk and initiative and that the patient is ultimately responsible for compliance with any laws or regulations associated with the patient's use.
*8. Specific Use:The patient/ surrogate understands that UCSD makes no representation that materials or servicesdelivered via telecommunication services, or listed on telemedicine websites, are appropriate or available for use in any other location. *

Family Medicine - Banker Hills

[table#1]:
CC:
Physical (Bilateral shaking of hands)

[table#2]:
Subjective:
Joel Paul Polizzi is a very pleasant 37 year old male who is here to establish care:

Prior medical problems include:
None, patient does not take any medications.

Acute concerns:
Tremor
Patient is here for evaluation of shaking noticed on bilateral hands gradually progressing Over the last 3 years.
He states he never had 'steady hands' but he never had problems eating, things never felt from his hands.
More noticeable lately, when he tried to grab a tray during office party.
Action tremors. No issues with during resting. Right worse than Left
Works for IT company. Mother has Thyroid disorder. No other symptoms associated

Lifestyle:
Nutrition: Varied diet, no restrictions
Exercise: Minimal
Weight mgmt: Stable BMI 19
Mental health: Negative for depression or anxiety.
[table#3]:

PHYSICAL EXAM:
General: alert, in no acute distress
Head: Normocephalic
HEENT: EOMI, no scleral icterus
Lungs: Clear without rales, rhonchi, wheezing or diminished breath sounds. Breathing comfortably on room air
Heart: RRR, no murmur, gallop, or rub
Abdomen: Soft, nontender without masses or hepatosplenomegaly
Neuro: alert and oriented, BL essential tremors resolved with resting noticed on hands

[table#18]:
**Labs: **
No recent lasb
[table#19]:
Imaging:
No results found.

[table#20]:
Assessment and Plan:
Joel Paul Polizzi is a pleasant 37 year old male has a past medical history of Tinnitus.
[table#21]:
		ICD-10-CM	ICD-9-CM	
1.	**Routine general medical examination at a health care facility **	**Z00.00**	**V70.0**	**Lipid Panel Green Plasma Separator Tube**
				Comprehensive Metabolic Panel (CMP)
				CBC w/ Diff Lavender
2.	Essential tremor	G25.0	333.1	propranolol (INDERAL LA) 60 MG CP24
3.	Lipid screening	Z13.220	V77.91	Lipid Panel Green Plasma Separator Tube

| 4. | Need for vaccination | Z23 | V05.9 | Pneumococcal (PCV-20, PREVNAR 20) |
| | | | CANCELED: Prevnar 13 (PCV13) Vaccine |
| |

Plan:
1. Routine general medical examination at a health care facility
-Exam completed without concerning findings except for BL essential tremors
-Patient was counseled regarding findings
-STI testing up to date
-HCM reviewed.
-Information on whole food plant based diet provided
-Routine physical in one year
-Interim follow-up as documented below
- Lipid Panel Green Plasma Separator Tube; Future
- Comprehensive Metabolic Panel (CMP); Future
- CBC w/ Diff Lavender; Future

2. Essential tremor
New diagnosis
Shaking noticed on bilateral hands gradually progressing Over the last 3 years.
More noticeable lately, when he tried to grab a tray during office party.
Action tremors. No issues with during resting. Right worse than Left
No other symptoms associated
Obtain TSH to r/o thyroid disorder
Start propanolol as prescribed as needed for tremor
RTC in 2-3 months for f/u
- propranolol (INDERAL LA) 60 MG CP24; Take 1 capsule (60 mg) by mouth daily as needed (Action tremors of BL hands). Dispense: 30 each; Refill: 1

3. Lipid screening
- Lipid Panel Green Plasma Separator Tube; Future

4. Need for vaccination
- Pneumococcal (PCV-20, PREVNAR 20)
[table#22]:
**Health Maintenance: **

[table#23]:
Health Maintenance
Topic	Date Due
•	PHQ2 depression screen	01/29/2025
•	Tetanus (2 - Td or Tdap)	03/22/2027
•	Lipid Screening	01/29/2029
•	Shingles Vaccine (1 of 2)	06/28/
2036
•	Hepatitis C Screening	Completed
•	Influenza	Completed
•	Universal HIV Screening	Completed
•	Polio Vaccine	Aged Out
•	IMM_Hep A Vaccine Series	Aged Out
•	HPV Vaccine <= 26 Yrs	Aged Out
•	Meningococcal MCV4 Vaccine	Aged Out
•	Pneumococcal Vaccine	Aged Out
•	COVID-19 Vaccine	Discontinued

[table#24]:
Followup:
Return in about 3 months (around 4/29/2024) for Video appt. to f/u on essential tremors.

All of the patients questions were answered and patient verbalized understanding and agreement of the above plan. Pertinent past medical history, surgical history, family history, and social history were reviewed. I have reviewed pertinent recent medical encounters, lab data, imaging data, and procedures.

It was a pleasure to see Joel Paul Polizzi today. Patient is to contact me if there are any further questions or concerns. This can be done either by contacting the clinic or through MyChart.

I personally spent 45 total minutes in face-to-face and non-face-to-face activities related to the patient's visit today, excluding any

separately reportable services/procedures.

Review of Systems
Review of Systems
Constitutional: Positive for chills and fever.
HENT: Positive for congestion.
Respiratory: Positive for cough. Negative for shortness of breath and wheezing.
Cardiovascular: Negative for chest pain.
Gastrointestinal: Negative for diarrhea, nausea and vomiting.
Genitourinary: Negative for dysuria.
Musculoskeletal: Negative for back pain, myalgias, neck pain and neck stiffness.
Allergic/Immunologic: Negative for immunocompromised state.
Neurological: Negative for diz
ziness and weakness.
All other systems reviewed and are negative.

Physical Examination:
Joel Paul Polizzi is a well developed well nourished male in no apparent distress. he is alert and oriented *3.
Physical Exam
Constitutional:
General: He is not in acute distress.
Appearance: He is not ill-appearing.
HENT:
Head: Normocephalic.
Nose: Congestion present.
Eyes:
Conjunctiva/sclera: Conjunctivae normal.
Pulmonary:
Effort: Pulmonary effort is normal. No respiratory distress.
Musculoskeletal:
Cervical back: Normal range of motion.
Skin:
Coloration: Skin is not jaundiced or pale.
Neurological:
Mental Status: He is alert and oriented to person, place, and time.
Psychiatric:
Mood and Affect: Mood normal.
Thought Content: Thought content normal.

***Impression: ***
[table#10]:
		ICD-10-CM	ICD-9-CM	
1.	**COVID-19 **	**U07.1**	**079.89**	**nirmatrelvir-ritonavir 300 mg-100 mg (PAXLOVID) 20 x 150 MG & 10 x 100MG tablets**

Patient is a generally healthy, 37 y/o male with 24 hours of upper respiratory symptoms and positive home COVID 19 test. Denies any other acute concerns. No significant risk factors but was prescribed Paxlovid last year and tolerated well with positive experience and requesting again for this infection. Denies any other adverse reactions. No history of kidney disease. Encouraged supportive care, rest and oral hydration with strict in-person evaluation precautions. Paxlovid sent to pharmacy. No drug interactions noted.

Follow up precautions including ER and Urgent care precautions given. Patient to arrange follow up. Patient comfortable with plan.

Kevin Schwartzel, PA-C
Supervising Physician: Shauna Conry, MD

----------*(data below generated by Kevin N Schwartzel, PA)*----------

Patient Verification & Telemedicine Consent:
*I have verified this is the **correct patient** and have obtained **verbal consent** from the patient/ surrogate to perform this voluntary **telemedicine evaluation** (including obtaining history, performing visual examination and reviewing data provided by the patient). The patient/ surrogate has the **right to refuse** this evaluation. I have **explained risks **(including potential loss of confidentiality), **benefits, alternatives**, and the **potential need for subsequent face to face** care. Patient/ surrogate understands that there is a risk of medical inaccuracies given that our recommendations will be made based on reported data (and we must therefore assume this information is accurate). Knowing that there is a risk that this information is not reported accurately, and that the telemedicine video, audio, or data feed may be incomplete, the patient **agrees to proceed** with evaluation and holds us harmless knowing these risks. The patient/ surrogate has been notified that **other healthcare professionals** (including students, residents and technical personnel) may be involved in this audio-video evaluation. All laws concerning **confidentiality** and patient access to medical records and copies of medical records apply to telemedicine. I have **reviewed this **above verification and consent paragraph with the patient/ surrogate. If the patient is not capacitated to understand the above, and no surrogate is available, since this is not an emergency evaluation, the visit will be rescheduled until such time that the patient can consent, or the surrogate is available to consent.*

Urgent Care Services

Chief Complaint:
[table#1]:
Chief Complaint
Patient presents with
•	Back Pain
		X2 wks, no injury

[table#2]:
History of Present Illness

Joel Paul Polizzi is a 36 year old male with upper left back pain. Describes episode 2 weeks ago where he thinks he may have pinched a nerve, had sharp stabbing pain that lasted for a couple of days before self-resolving. Yesterday, was walking, and felt similar pain again. Took ibuprofen last night with minimal relief, so presented here today. Denies chest pain, nausea, vomiting. Denies any preceding trauma, no falls. Denies history of cancer, IV drug use. Denies bowel or bladder incontinence, weakness or numbness in his arms or legs.

[table#3]:
Review of Systems

**All other systems reviewed and are negative unless otherwise noted in the HPI or above. **This was done per my custom and practice for systems appropriate to the chief complaint in an urgent care setting and varies depending on the quality of history that the patient is able to provide.

[table#4]:
Physical Examination

[table#5]:
	02/23/23 0934
BP:	137/81
Pulse:	76
Resp:	16
Temp:	97.8 °F (36.6 °C)
SpO2:	98%

Gen: No acute distress, nontoxic
Head: Normocephalic, atraumatic
Eyes: PERRL, EOMI, normal conjunctiva
ENT: MMM, OP clear, normal nares
Neck: Supple, no stridor or nuchal rigidity
Pulm: No respiratory distress, CTAB, no W/R/R
CV: RRR, no m/r/g, strong pulses
GI: NABS, abdomen soft, NT, ND, no rigidity or guarding
Back: No CVAT, no midline TTP, moderate tenderness palpation over left midthoracic paraspinal muscles
Ext: Nontender without swelling, deformity, or edema
Neuro: Alert, appropriately responding to questions, CN II-XII grossly intact, strength 5/5 in bilateral biceps, triceps, wrist flexion/extension, grip strength, hip flexion/extension, knee flexion/extension, ankle flexion/extension; SILT throughout; normal gait
Psych: Normal mood, affect, speech, and cognition
Skin: Warm, well perfused, no diaphoresis, pallor or rash

[table#6]:
Lab Results

[table#7]:
Vitals:

BP Location:	Left arm
BP Patient Position:	Sitting
BP cuff size:	Regular
Pulse:	76
Resp:	16
Temp:	97.8 °F (36.6 °C)
SpO2:	98%

[table#8]:
Medical Decision Making

36-year-old male presents with left upper thoracic back pain. Patient is afebrile, vitals within normal limits. No focal neurologic deficits. Denies any preceding trauma, no red flags. Will defer any labs or imaging. Greatest suspicion for MSK etiology, suspect likely pinched nerve as the cause of his pain. Recommended continuing treatment with NSAIDs, Tylenol. Discussed exercises, physical therapy maneuvers that would also help. Advised that if patient has worsening persistent pain, develops weakness or numbness in his arms or legs, difficulty controlling his bowel or his bladder, fevers, or any other concerns, he should proceed to the nearest emergency department. Patient understands this plan and is in agreement. Discharged to home.

[table#9]:
Diagnosis

[table#10]:
		ICD-10-CM	ICD-9-CM	
1.	**Acute left-sided thoracic back pain **	**M54.6**	**724.1**	**ketOROLAC (TORADOL) injection 30 mg**

URGENT CARE ATTENDING NOTE

JOEL PAUL POLIZZI
MRN: 17948266
DOB: 6/28/1986
PMD: No Pcp, Per Patient

CC: Sinus Problem (Sinus congestion x 5 days)

[table#1]:
Chief Complaint
Patient presents with
•	Sinus Problem
		*Sinus congestion x 5 days *

HPI: Joel Paul Polizzi is a 36 year old male has a past medical history of Tinnitus. who presents with **sinus congestion x 5days. Patient reports multiple negative COVID test patient denies any fevers patient denies any green sputum production patient reports some mild postnasal drip. The patient reports that he is allergic to penicillin.**

PMHx: see hpi
PSHx: has a past surgical history that includes Ankle hardware implantation (Right, 03/2011) and Colonoscopy (07/27/2020).
Shx: reports that he has been smoking cigarettes. He has a 5.00 pack-year smoking history. He has never used smokeless tobacco. He reports current alcohol use. He reports current drug use. Drug: Marijuana.
FamHx: family history includes Cancer in his maternal grandmother and paternal grandfather; Dementia in his paternal grandmother; No Known Problems in his brother, brother, father, and maternal grandfather; Thyroid in his mother.
Meds: has a current medication list which includes the following prescription(s): azithromycin.
ALL: Penicillins
ROS:
all other systems reviewed and negative as per my custom and practice for the above complaint

EXAM
BP 142/79 (BP Location: Left arm, BP Patient Position: Sitting, BP cuff size: Regular) | Pulse 95 | Temp 98.6 °F (37 °C) (Oral) | Resp 16 | SpO2 96%
GEN: NAD a&o nontoxic well appearing
HEENT: anicteric, MMM mild pharyngeal erythema no exudates no tonsillar swelling no lymphadenopathy
NECK: Normal ROM no jvd, no stiffness
LUNGS: no respiratory distress
EXT: normal ROM all joints
SKIN: no rash or lesions
NEURO: normal mentation, speech, and gait

A/P: Discussed plan of care with patient. Offered viral testing we discussed risks and benefits of antibiotics symptoms most likely viral patient reports he will wait an additional 5 days and if symptoms have not resolved then only he will take antibiotics patient reports allergy to penicillin but agreeable to Z-Pak

[table#2]:
		ICD-10-CM	ICD-9-CM	
1.	**Sinusitis, unspecified chronicity, unspecified location **	**J32.9**	**473.9**	**azithromycin (ZITHROMAX) 250 MG tablet**

MEDICATIONS PRESCRIBED (FOR DISCHARGED ED PATIENTS)

I discussed with patient the nature of this patient's illness/problem, results of all resulted tests, course of treatment, and prospects for recovery/follow up care needs. patient verbalized understanding and agreement with plan. All questions answered.
Parameters of returning to ED/UC also discussed with patient, who voiced understanding.
The patient understands to return immediately if the symptoms worsen or new symptoms develop. Additionally, the patient will return if symptoms persist.

Isolation information for Patients
(updated 12/3/2020)

Your health care provider will evaluate whether you can be cared for at home. If it is determined that you do not need hospitalization and can be isolated at home, you will be monitored by your health care provider.

You should follow the prevention steps below and even if your test is negative follow these guidelines including waiting to leave home until you are no longer contagious as per instructions at end of this document. Please follow any additional instructions for return to your workplace if you are an essential worker.

Contact our dedicated nurse line 1-800-926-8273 if you are noting worsening respiratory symptoms and need advice. This line is open 8 am -5 pm M-F days a week, on the weekend please call your physician or go Emergency Department. If sudden and severe worsening in symptoms please call 911 and let them know you are being tested or are COVID-19 positive.

Stay home except to get medical care
San Diego has a Health order for quarantine and it is a misdemeanor if you are not following:
https://www.sandiegocounty.gov/content/dam/sdc/hhsa/programs/phs/Epidemiology/covid19/HealthOfficerOrder-Isolation.pdf
You should do no activities outside your home, except for getting medical care. Do not go to work, school, or public areas. Do not use public transportation, ride-sharing, or taxis.
If you have a medical appointment, call the healthcare provider and tell them that you have or may have COVID-19. This will help the healthcare provider's office take steps to keep other people from getting infected or exposed.
Have all essential items (eg groceries) delivered to your home and left at your doorstep. If you need assistance with this, call 211 to learn about available services.

Separate yourself from other people and animals in your home
People: As much as possible, stay in a specific room and away from other people in your home. If available, you should use a separate bathroom.
Animals: Restrict contact with pets and other animals while you are sick with COVID-19, just like you would around other people. Avoid petting, snuggling, being kissed or licked, and sharing food with pets. When possible, have another member of your household care for your animals while you are sick. If you must care for your pet or be around animals while you are sick, wash your hands before and after you interact with them and wear a facemask.

Notify contacts of your illness if you test positive:
Because people infected with COVID can spread the illness before they develop symptoms, you need to make a list of all people you've been in contact with from 48 hours prior to your first symptom through until you started home isolation.
Contact the people on this list and inform them of your COVID19 diagnosis or potential diagnosis if you have symptoms but are

not tested.
Inform all of your contacts that they need to quarantine themselves in their homes for 14 days from the last point of contact. They may leave their homes only to get medical care.
If any of your contacts are an essential worker, they should contact their employer about their return to work policy. If their employer does not have a policy, they may follow the CDC guidelines for exposed essential workers: https://www.cdc.gov/coronavirus/2019-ncov/community/critical-workers/implementing-safety-practices.html

Wear a facemask
You should wear a facemask when you are around other people (e.g., sharing a room or vehicle) or pets and before you enter a health care provider's office. If you are unable to wear a facemask (for example, because it causes trouble breathing), then people who live with you should not stay in the same room with you, or they should wear a facemask if they enter your room.

Cover your coughs and sneezes
Cover your mouth and nose with a tissue when you cough or sneeze. Throw used tissues in a lined trash can; immediately wash your hands with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains 60 to 95% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry. Soap and water should be used preferentially if hands are visibly dirty.

Clean your hands often
Wash your hands often with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains 60 to 95% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry. Soap and water should be used preferentially if hands are visibly dirty. Avoid touching your eyes, nose, and mouth with unwashed hands.

Avoid sharing personal household items
You should not share dishes, drinking glasses, cups, eating utensils, towels, or bedding with other people or pets in your home. After using these items, they should be washed thoroughly with soap and water.

Clean all "high-touch" surfaces everyday
High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables. Also, clean any surfaces that may have blood, stool, or bodily fluids on them. Use a household cleaning spray or wipe, according to the label instructions. Labels contain instructions for safe and effective use of the cleaning product including precautions you should take when applying the product, such as wearing gloves and making sure you have good ventilation during use of the product.

Monitor your symptoms
Seek prompt medical attention if your illness is worsening (e.g., difficulty breathing). Before seeking care, call your health care provider and tell them that you have, or are being evaluated for, COVID-19. Put on a facemask if you have one before you enter the facility. These steps will help the health care provider's office to keep other people in the office or waiting room from being infected or exposed. Persons who are placed under active monitoring or facilitated self-monitoring should follow instructions provided by their local health department or occupational health professionals, as appropriate.
If you have a medical emergency and need to call 911, notify the dispatch personnel that you have, or are being evaluated for COVID-19. If possible, put on a facemask before emergency medical services arrive.

Discontinuing home isolation
Patients with confirmed COVID-19 or with respiratory symptoms and a negative COVID-19 test should remain under home isolation precautions until the following three things have happened:

1. You have had no fever for at least 24 hours (that is one full day of no fever without the use medicine that reduces fevers)
AND
2. Other symptoms have improved (for example, when your cough or shortness of breath have improved)
AND
3. At least 10 days have passed since your symptoms first appeared

Patients who have been exposed to someone with COVID-19 infection are required to quarantine. Your quarantine can end when one of the following is true:

1. 14 days have passed since you were exposed and you have no symptoms. This is the approach that minimizes the risk that you could develop COVID-19 and that you infect another person (less than 1% chance of spread), and is the strongly recommended approach.
or
2. 10 days have passed since you were exposed and you have no symptoms. There is about a 1% chance that you could develop COVID-19 and that you infect another person with this approach.
or
3. 7 days have passed since you were exposed, and you have tested negative with a COVID PCR test at least 5 days after your exposure. There is about a 5% chance that you could develop COVID-19 and that you infect another person with this approach.

If you are an essential worker, please contact your employer after you meet the above criteria to discuss their specific return to work policy. Please abide by their policies.

Please go to https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/index.html for additional information.

UCSDH Telemedicine MyChart Video Visit

----------*(data below generated by Clarissa S Chan, PA)*----------

Patient Verification & Telemedicine Consent:
*I am proceeding with this evaluation at the direct request of the patient. I have verified this is the **correct patient** and have obtained **verbal consent and written consent** from the patient/ surrogate to perform this voluntary **telemedicine evaluation** (including obtaining history, performing examination and reviewing data provided by the patient). The patient/ surrogate has the **right to refuse** this evaluation. I have **explained risks **(including potential loss of confidentiality), **benefits, alternatives**, and the **potential need for subsequent face to face** care. Patient/ surrogate understands that there is a risk of medical inaccuracies given that our recommendations will be made based on reported data (and we must therefore assume this information is accurate). Knowing that there is a risk that this information is not reported accurately, and that the telemedicine video, audio, or data feed may be incomplete, the patient **agrees to proceed** with evaluation and holds us harmless knowing these risks. In this evaluation, we will be providing **recommendations only**. The patient/ surrogate has been notified that **other healthcare professionals** (including students, residents and technical personnel) may be involved in this audio-video evaluation. All laws concerning **confidentiality** and patient access to medical records and copies of medical records apply to telemedicine. The patient/ surrogate has received the UCSD Notice of Privacy Practices. I have **reviewed this **above verification and consent paragraph with the patient/ surrogate. If the patient is not capacitated to understand the above, and no surrogate is available, since this is not an emergency evaluation, the visit will be rescheduled until such time that the patient can consent, or the surrogate is available to consent.*

Isolation and Result Information for UCSD Health Drive Up Testing
(updated 8/9/2020)

PLEASE KEEP THIS DOCUMENT UNTIL YOU RECEIVE YOUR RESULTS

RESULT INFORMATION:
If your COVID-19 Coronavirus Assay swab is resulted as Detected (Positive) you will receive a call from a Provider or Team that ordered your test, you will receive follow up monitoring for 10 days.

If your COVID-19 Coronavirus Assay swab is resulted as Not Detected (Negative) this suggests that the collected specimen from your nose did not have genetic material consistent with COVID-19. There is a small chance that the test could be falsely negative. Your negative results will be released only to MyChart, if you do not have MyChart we will communicate the results to you by telephone.

More information:
Your health care provider will evaluate whether you can be cared for at home. If it is determined that you do not need hospitalization and can be isolated at home, you will be monitored by your health care provider.

You should follow the prevention steps below and even if your test is negative follow these guidelines including waiting to leave home until you are no longer contagious as per instructions at end of this document.

Contact our dedicated nurse line 1-800-926-8273 if you are noting worsening respiratory symptoms and need advice. This line is open 8 am -5 pm 7 days a week. If sudden and severe worsening in symptoms please call 911 and let them know you are being tested or are COVID-19 positive.

Stay home except to get medical care
San Diego has a Health order for quarantine and it is a misdemeanor if you are not following: https://www.sandiegocounty.gov/content/dam/sdc/hhsa/programs/phs/Epidemiology/covid19/HealthOfficerOrder-Isolation.pdf
· You should do no activities outside your home, except for getting medical care. Do not go to work, school, or public areas. Do not use public transportation, ride-sharing, or taxis.
· If you have a medical appointment, call the healthcare provider and tell them that you have or may have COVID-19. This will help the healthcare provider's office take steps to keep other people from getting infected or exposed.
· Have all essential items (e.g. groceries) delivered to your home and left at your doorstep. If you need assistance with this, call 211 to learn about available services.

Separate yourself from other people and animals in your home
· People: As much as possible, stay in a specific room and away from other people in your home. If available, you should use a separate bathroom.
· Animals: Restrict contact with pets and other animals while you are sick with COVID-19, just like you would around other people. Avoid petting, snuggling, being kissed or licked, and sharing food with pets. When possible, have another member of your household care for your animals while you are sick. If you must care for your pet or be around animals while you are sick, wash your hands before and after you interact with them and wear a facemask.

Notify contacts of your illness if you test positive:
· Because people infected with COVID can spread the illness before they develop symptoms, you need to make a list of all people you've been in contact with from 48 hours prior to your first symptom through until you started home isolation.
· Contact the people on this list and inform them of your COVID19 diagnosis or potential diagnosis if you have symptoms but are not tested.
· Inform all of your contacts that they need to quarantine themselves in their homes for 14 days from the last point of contact. They may leave their homes only to get medical care.
· If any of your contacts are an essential worker, they should contact their employer about their return to work policy. If their employer does not have a policy, they may follow the CDC guidelines for exposed essential workers: https://www.cdc.gov/coronavirus/2019-ncov/community/critical-workers/implementing-safety-practices.html

Wear a facemask
· You should wear a facemask when you are around other people (e.g., sharing a room or vehicle) or pets and before you enter a health care provider's office. If you are unable to wear a facemask (for example, because it causes trouble breathing), then people who live with you should not stay in the same room with you, or they should wear a facemask if they enter your room.

Cover your coughs and sneezes
· Cover your mouth and nose with a tissue when you cough or sneeze. Throw used tissues in a lined trash can; immediately wash your hands with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains 60 to 95% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry. Soap and water should be used preferentially if hands are visibly dirty.

Clean your hands often
· Wash your hands often with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains 60 to 95% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry. Soap and water should be used preferentially if hands are visibly dirty. Avoid touching your eyes, nose, and mouth with unwashed hands.

Avoid sharing personal household items
· You should not share dishes, drinking glasses, cups, eating utensils, towels, or bedding with other people or pets in your home. After using these items, they should be washed thoroughly with soap and water.

Clean all "high-touch" surfaces everyday
· High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables. Also, clean any surfaces that may have blood, stool, or bodily fluids on them. Use a household cleaning spray or wipe, according to the label instructions. Labels contain instructions for safe and effective use of the cleaning product including precautions you should take when applying the product, such as wearing gloves and making sure you have good ventilation during use of the product.

Monitor your symptoms
· Seek prompt medical attention if your illness is worsening (e.g., difficulty breathing). Before seeking care, call your health care provider and tell them that you have, or are being evaluated for, COVID-19. Put on a facemask if you have one before you enter the facility. These steps will help the health care provider's office to keep other people in the office or waiting room from being infected or exposed. Persons who are placed under active monitoring or facilitated self-monitoring should follow instructions provided by their local health department or occupational health professionals, as appropriate.
· If you have a medical emergency and need to call 911, notify the dispatch personnel that you have, or are being evaluated for COVID-19. If possible, put on a facemask before emergency medical services arrive.

Discontinuing home isolation**
Patients with confirmed COVID-19 or with respiratory symptoms and a negative COVID-19 test should remain under home isolation precautions until the following three things have happened:

• You have had no fever for at least 72 hours (that is three full days of no fever without the use medicine that reduces fevers)
AND
• Other symptoms have improved (for example, when your cough or shortness of breath have improved)
AND
• At least 10 days have passed since your symptoms first appeared

• You should continue to use personal protective equipment.
• If you have any symptoms or questions please contact your Health Care Provider or Primary Care Physician for further guidance.
• Patients established with UCSD PCP please contact your PCP
• For those that do not have a UCSD PCP but would like additional guidance from UCSD please schedule an express care video visit by contacting 800-926-8273 https://health.ucsd.edu/request_appt/walk-in-clinics/Pages/default.aspx

**For symptomatic UCSD employee please follow up with supervisor for return to work information. Please go to https://pulse.ucsd.edu/coronavirus/ for additional information.

Please go to https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/index.html for additional information.
If you are an essential worker, please contact your employer after you meet the above criteria to discuss their specific return to work policy. Please abide by their policies.

Information for UCSD Students:
• If your results are negative, they will automatically be released to MyStudentChart.
• If your result is positive you will be called by a Student Health Provider and they will provide clinical guidance and initiate contact tracing.
• All UCSD Students will be provided daily medical checks until they are fully recovered
• UCSD students living on campus with a positive test will be provided isolation housing on campus including daily meal support.
• Questions for UCSD students: Please call 858-534-3300 to connect to an Advice Nurse both during clinic and after hours,or send a message to Ask-A-Nurse in MyStudentChart if you have questions

Isolation and Result Information for UCSD Health Drive Up Testing
(updated 6/30/2020)

PLEASE KEEP THIS DOCUMENT UNTIL YOU RECEIVE YOUR RESULTS

RESULT INFORMATION:
If your COVID-19 Coronavirus Assay swab is resulted as Detected (Positive) you will receive a call from a Provider or Team that ordered your test, you will receive follow up monitoring for 10 days.

If your COVID-19 Coronavirus Assay swab is resulted as Not Detected (Negative) this suggests that the collected specimen from your nose did not have genetic material consistent with COVID-19. There is a small chance that the test could be falsely negative. Your negative results will be released only to MyChart, if you do not have MyChart we will communicate the results to you by telephone.

More information:
Your health care provider will evaluate whether you can be cared for at home. If it is determined that you do not need hospitalization and can be isolated at home, you will be monitored by your health care provider.

You should follow the prevention steps below and even if your test is negative follow these guidelines including waiting to leave home until you are no longer contagious as per instructions at end of this document.

Contact our dedicated nurse line 1-800-926-8273 if you are noting worsening respiratory symptoms and need advice. This line is open 8 am -5 pm 7 days a week. If sudden and severe worsening in symptoms please call 911 and let them know you are being tested or are COVID-19 positive.

Stay home except to get medical care
San Diego has a Health order for quarantine and it is a misdemeanor if you are not following: https://www.sandiegocounty.gov/content/dam/sdc/hhsa/programs/phs/Epidemiology/covid19/HealthOfficerOrder-Isolation.pdf
· You should do no activities outside your home, except for getting medical care. Do not go to work, school, or public areas. Do not use public transportation, ride-sharing, or taxis.
· If you have a medical appointment, call the healthcare provider and tell them that you have or may have COVID-19. This will help the healthcare provider's office take steps to keep other people from getting infected or exposed.
· Have all essential items (e.g. groceries) delivered to your home and left at your doorstep. If you need assistance with this, call 211 to learn about available services.

Separate yourself from other people and animals in your home
· People: As much as possible, stay in a specific room and away from other people in your home. If available, you should use a separate bathroom.
· Animals: Restrict contact with pets and other animals while you are sick with COVID-19, just like you would around other people. Avoid petting, snuggling, being kissed or licked, and sharing food with pets. When possible, have another member of your household care for your animals while you are sick. If you must care for your pet or be around animals while you are sick, wash your hands before and after you interact with them and wear a facemask.

Notify contacts of your illness if you test positive:
· Because people infected with COVID can spread the illness before they develop symptoms, you need to make a list of all people you've been in contact with from 48 hours prior to your first symptom through until you started home isolation.
· Contact the people on this list and inform them of your COVID19 diagnosis or potential diagnosis if you have symptoms but are not tested.
· Inform all of your contacts that they need to quarantine themselves in their homes for 14 days from the last point of contact. They may leave their homes only to get medical care.
· If any of your contacts are an essential worker, they should contact their employer about their return to work policy. If their employer does not have a policy, they may follow the CDC guidelines for exposed essential workers: https://www.cdc.gov/coronavirus/2019-ncov/community/critical-workers/implementing-safety-practices.html

Wear a facemask
· You should wear a facemask when you are around other people (e.g., sharing a room or vehicle) or pets and before you enter a health care provider's office. If you are unable to wear a facemask (for example, because it causes trouble breathing), then people who live with you should not stay in the same room with you, or they should wear a facemask if they enter your room.

Cover your coughs and sneezes
· Cover your mouth and nose with a tissue when you cough or sneeze. Throw used tissues in a lined trash can; immediately wash

your hands with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains 60 to 95% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry. Soap and water should be used preferentially if hands are visibly dirty.

Clean your hands often
· Wash your hands often with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains 60 to 95% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry. Soap and water should be used preferentially if hands are visibly dirty. Avoid touching your eyes, nose, and mouth with unwashed hands.

Avoid sharing personal household items
· You should not share dishes, drinking glasses, cups, eating utensils, towels, or bedding with other people or pets in your home. After using these items, they should be washed thoroughly with soap and water.

Clean all “high-touch” surfaces everyday
· High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables. Also, clean any surfaces that may have blood, stool, or bodily fluids on them. Use a household cleaning spray or wipe, according to the label instructions. Labels contain instructions for safe and effective use of the cleaning product including precautions you should take when applying the product, such as wearing gloves and making sure you have good ventilation during use of the product.

Monitor your symptoms
· Seek prompt medical attention if your illness is worsening (e.g., difficulty breathing). Before seeking care, call your health care provider and tell them that you have, or are being evaluated for, COVID-19. Put on a facemask if you have one before you enter the facility. These steps will help the health care provider's office to keep other people in the office or waiting room from being infected or exposed. Persons who are placed under active monitoring or facilitated self-monitoring should follow instructions provided by their local health department or occupational health professionals, as appropriate.
· If you have a medical emergency and need to call 911, notify the dispatch personnel that you have, or are being evaluated for COVID-19. If possible, put on a facemask before emergency medical services arrive.

Discontinuing home isolation
Patients with confirmed COVID-19 or with respiratory symptoms and a negative COVID-19 test should remain under home isolation precautions until the following three things have happened:

• You have had no fever for at least 72 hours (that is three full days of no fever without the use medicine that reduces fevers)
AND
• Other symptoms have improved (for example, when your cough or shortness of breath have improved)
AND
• At least 10 days have passed since your symptoms first appeared

• You should continue to use personal protective equipment.
• If you have any symptoms or questions please contact your Health Care Provider or Primary Care Physician for further guidance.
• Patients established with UCSD PCP please contact your PCP
• For those that do not have a UCSD PCP but would like additional guidance from UCSD please schedule an express care video visit by contacting 800-926-8273 https://health.ucsd.edu/request_appt/walk-in-clinics/Pages/default.aspx

Please go to https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/index.html for additional information.
If you are an essential worker, please contact your employer after you meet the above criteria to discuss their specific return to work policy. Please abide by their policies.

*For symptomatic UCSD employee please follow up with supervisor for return to work information. Please go to https://pulse.ucsd.edu/coronavirus/ for additional information.

INR	1.1			06/23/2020 4:58 PM PDT	CENTER ADV LAB MEDICINE	

Comment:

```
For patients who are on oral anticoagulant
therapy, the recommended international normalized
ratio (INR) is: INR = 2-3 for most patients
               INR = 2.5-3.5 for patients with
               mechanical prosthetic heart valves
```

Patient Instructions

Gary Michael Vilke - 02/17/2020 1:00 PM PST

Formatting of this note is different from the original.

Influenza, Seasonal

You have been seen for influenza. This is sometimes called “the flu.” Often, no tests are done but influenza is strongly suspected. For this reason, many doctors are giving the diagnosis of “Influenza-Like Illness.”

Influenza is very contagious. This means it spreads easily among people. It is caused by the influenza virus. That is why it is also called "the flu." It affects the respiratory tract. This includes the nose, throat and lungs. In some people, it can cause very serious problems. This usually happens with the very young and the elderly. The Centers for Disease Control and Prevention (CDC) reports that an average of 5-20% of people living in the U.S. are affected by regular seasonal influenza every year. This includes influenza A and B. More than 200,000 people are hospitalized from flu complications. About 36,000 people die from flu-related causes every year.

STAY AWAY FROM OTHER PEOPLE WHO ARE NOT YET AFFECTED. THIS IS THE BEST WAY TO STOP THE SPREAD OF INFLUENZA. YOU CAN SPREAD THE FLU FROM ONE DAY BEFORE YOU GET SICK UP TO 7 DAYS AFTER YOU DEVELOP SYMPTOMS.

UNTIL IT IS CONFIRMED THAT YOU DON’T HAVE INFLUENZA, YOU SHOULD:
· Stay off from work. You should be off of work for 7 days from the start of symptoms or until the viral cultures show you don’t have influenza.
· Stay home and do not go into public places.
· Stay away from others in the house.
· Wash your hands often.
· Cover your mouth when you sneeze or cough. Use your sleeve to cover your mouth and nose. Do not use your hand.

People you live with and those you had close contact with, should watch for flu signs. People with a serious medical condition or who are pregnant should tell their doctor they were exposed to flu.

Influenza often happens as an epidemic in the fall and winter. This means many people get the flu virus at the same time. It spreads from person to person. Over the centuries, there have been epidemics of many different “new” strains of influenza.

Most people with influenza get these symptoms:
· High fevers: Fevers are often higher than 102°F or 39°C.
· Cough. A dry, hacking cough is most common.
· Headache: The headache may be worse with the fever. It can be there even when the temperature is normal.
· Muscle aches. Many people have muscle pain. These are called “myalgias.”
· Sore throat.

You may also feel weak and fatigued (tired). You may also get a runny nose or congestion (stuffy nose). Some people will have mild stomach symptoms. This can include vomiting (throwing up). Sometimes it includes mild diarrhea.

Influenza does not primarily involve vomiting and diarrhea. Vomiting and diarrhea are usually symptoms of a completely different problem. This problem is called "gastroenteritis." Gastroenteritis is often called "the stomach flu." This is how the confusion came about! True influenza is a lung infection.

During flu season, influenza can sometimes be diagnosed without tests. This can be done if a patient has the right set of symptoms. These are called "classic flu" symptoms. Sometimes flu testing is done. This is usually with a test called a “Rapid Influenza Test.” Results show up in a few minutes. The test is not perfect. It misses many cases. Sometimes, more specialized tests are done. These tests pick up more of the cases. However, results are not ready for a few days.

Usually, the "flu shot" is good at preventing influenza. Some years the shot is less effective than others. You can sometimes still get severe influenza, even if you had the immunization (shot). You can still get "the stomach flu," (not true influenza), even after the flu

shot. Today, the current Influenza vaccine is designed to protect against seasonal Influenza A and B and H1N1. There are good supplies of the vaccine available. It is being given to all persons who would like to receive it.

Influenza treatment depends on how early in the course of the illness you are when diagnosed. With medicine, you may feel better sooner. Medicines do not cure the flu. However, they do help your body fight the infection.

Some antiviral medicines may help symptoms. They often only help if they are started in the first few days of the illness. The Centers for Disease Control and Prevention (CDC) makes recommendations as to who should get the antiviral medicine. Your doctor will decide if the medicine may be helpful for you.

Most patients get better with simple things like rest, fluids and a little time. Acetaminophen (Tylenol®) and/or ibuprofen (Advil® or Motrin®) can also help. Older patients or those with serious medical problems may have worse problems with the flu. They may need additional care.

Treatment of influenza usually is at home. Some patients need to be in the hospital. These are often very young and very old patients and those with severe symptoms. It also includes those with other serious medical problems.

It is OK for you to go home now. Follow the instructions above about staying away from others!

YOU SHOULD SEEK MEDICAL ATTENTION IMMEDIATELY, EITHER HERE OR AT THE NEAREST EMERGENCY DEPARTMENT, IF ANY OF THE FOLLOWING OCCURS:
· You have shortness of breath, wheezing or any severe problems breathing.
· You have a headache that gets worse or a stiff neck.
· You feel lightheaded or faint.
· You have chest pain.
· You have a cough and fever (temperature higher than 100.4ºF or 38ºC) that seem to come back AFTER your flu symptoms get better. This can be a different kind of lung infection called “pneumonia,” that sometimes happens after the flu.
· You feel sicker at any time or do not get better as expected. You can expect to feel sick for a week or so.
· You have any other new symptoms or concerns.

If you can't follow up with your doctor, or if at any time you feel you need to be rechecked or seen again, come back here or go to the nearest emergency department.

Tylenol and Advil as needed for fevers.

You are outside the window for treatment with Tamiflu.

Drink plenty of fluids

Patient Instructions

Jeffrey Daniel Jenks - 10/22/2018 8:00 AM PDT

Formatting of this note might be different from the original.

It was a pleasure seeing you today. My name is Dr. Jeffrey Jenks and you can contact me if you have any questions. The clinic number is 1-800-926-8273 and fax number 619-471-9275.

I am not sure what is causing your knee pain, but it is most likely something similar to patellofemoral pain syndrome. As discussed I think osteoarthritis or a blood clot are much less likely.

If this does not improve within the next couple weeks let me know. In the meantime I would try ice, non-steroidal anti-inflammatories, and gentle stretching.

INTERNAL MEDICINE OUTPATIENT CLINIC NOTE

**Date: **10/22/18

**History of Present Illness: **
Joel Paul Polizzi is a 32 year old man here with bilateral knee pain.

Last seen 07/31/2017.

Endorses 3 weeks of anterior bilateral knee pain, R>L. Left knee pain is largely gone. Right knee feels like it has been "locking up" with really sharp pain in the anterior knee. Feels "tight" unless he is moving around and than will loosen up. Denies any swelling or erythema.

Denies any obvious injury or trauma. Seemed to occur following an international flight from London.

Impression and Recommendations: Joel Paul Polizzi is a 32 year old man here with bilateral knee pain.

#Bilateral knee pain: Left knee pain largely resolved, right knee pain persisting. Localized to anterior right knee at patella. Pain decreases when he moves as did application of heat or ice. Most likely patellofemoral pain syndrome or something similar. Doubt deep vein trombosis given location and lack of swelling, although possible. No signs of fracture or dislocation.

- Continue conservative treatment
- Given handout on patellofemoral syndrome
- Advised if pain persists to contact me, will consider x-ray left knee or doppler ultrasound

#RHM:
Colorectal cancer screening (every 10 years, 50-75): N/A
Prostate cancer screening (55-69, every 2 years): N/A
Immunizations:
TDaP due 03/2027
Prevnar >65: N/A
Pneumovax >65: N/A
Shingles >50: N/A
Declines Flu vaccine

Patient Instructions

Jeffrey Daniel Jenks - 07/31/2017 8:00 AM PDT

Formatting of this note might be different from the original.

It was a pleasure seeing you today. My name is Dr. Jeffrey Jenks and you can contact me if you have any questions. The clinic number is 619-471-9250.

As discussed, I don't think any of those small lesions on your right arm are concerning.

I have placed another referral to Audiology, please call the number provided to schedule an appointment.

Electronically signed by Jeffrey Daniel Jenks at 07/31/2017 8:13 AM PDT

Patient Instructions

Jeffrey Daniel Jenks - 03/22/2017 11:15 AM PDT

Formatting of this note might be different from the original.

It was a pleasure seeing you today. My name is Dr. Jeffrey Jenks and you can contact me if you have any questions. The clinic number is 619-471-9250.

Please have your labs done on the 4th floor. Please be fasting (no food for at least 12 hours prior but water is okay). The lab is open from:

Monday, Tuesday, Wednesday, Thursday, Friday 7:45 am - 4:45 pm

I have referred you to Audiology to have your tinnitus evaluated, please call to schedule an appointment

Results - documented in this encounter

(ABNORMAL) GLYCOSYLATED HGB(A1C), BLOOD - Final result (03/22/2017 11:52 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Glyco Hgb (A1C)	**4.7 (L)**	4.8 - 5.9 %			CENTER ADV LAB MEDICINE	

Comment:
Hemoglobin A1c values of 5.7-6.4 percent indicate an increased risk for developing diabetes mellitus. Hemoglobin A1c values greater than or equal to 6.5 percent are diagnostic of diabetes mellitus. Diagnosis should be confirmed by repeating the Hb A1c test. Hb F higher than 10 percent of total Hb may yield falsely low results. Conditions that shorten red cell survival, such as the presence of unstable hemoglobins like Hb SS, Hb CC, and Hb SC, or other causes of hemolytic anemia may yield falsely low results. Iron deficiency anemia may yield falsely high results.

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
Blood specimen (specimen)			03/22/2017 11:52 AM PDT	03/22/2017 3:02 PM PDT

LIPID(CHOL FRACT) PANEL, BLOOD - Final result (03/22/2017 11:52 AM PDT)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
Cholesterol	142	<200 mg/dL			CENTER ADV LAB MEDICINE	

Comment:
Borderline Risk 200-240 mg/dL
High Risk > 240 mg/dL

HDL-Cholesterol	60	mg/dL			CENTER ADV LAB MEDICINE	

Comment:
An HDL Cholesterol <40 mg/dL is a risk factor for coronary heart disease.

LDL-Chol (Calc)	71	<160 mg/dL			CENTER ADV LAB MEDICINE	
Non-HDL Cholesterol	82	mg/dL			CENTER ADV LAB MEDICINE	

Comment:
NonHDL Cholesterol target concentrations for lipid lowering depend on patients risk and are typically 30 mg/dL higher than LDL targets.

Triglycerides	57	10 - 170 mg/dL			CENTER ADV LAB MEDICINE
